IN THE MATTER OF THE APPLICATION OF BERMUDA WATER COMPANY, INC., FOR A DETERMINATION OF THE FAIR VALUE OF ITS WATER UTILITY PLANT AND PROPERTY, FOR INCREASES IN ITS RATES AND CHARGES FOR WATER UTILITY SERVICE, AND FOR RELATED APPROVALS.

## APPLICATION

#### Abstract

Bermuda Water Company, Inc., an Arizona public service corporation ("BWC" or the "Company") hereby submits this application ("Application") for an order establishing the fair value of its plant and property used for the provision of water utility service to the public, and based on such finding, approving permanent rates and charges for utility service designed to produce a fair return thereon, and for related approvals. In support of this Application, BWC states as follows:

1. BWC is a public service corporation engaged in providing water utility service in portions of Mohave County, Arizona, pursuant to certifies of convenience and necessity first granted by the Arizona Corporation Commission ("Commission") in Decision 33710 (February 26,1962 ) and then expanded subsequently thereafter. During the test year, BWC served approximately 8,758 residential customers, approximately 341 commercial customers, and approximately 149 other customers (including wholesale).
2. Pursuant to the definition in Arizona Administrative Code ("A.A.C.") R14-2103(A)(3)(q), BWC is classified as a Class " B " utility.
3. BWC's business office is located at 4544 Highway 95, Bullhead City, Arizona 86426 and its telephone number is (928) 763-6676. BWC's primary management contact is Seán Twomey. Mr. Twomey is employed by Water Service Corporation as President for the

Western Region, which includes Arizona and Nevada.
4. The persons responsible for overseeing and directing the conduct of this rate case are:

Seán Twomey, President BERMUDA WATER COMPANY
1240 E. State Street, Suite 115
Pahrump, Nevada 89048
Phone: (775) 727-7752
E-mail:Sean.Twomey@greatbasinwaterco.com
Aleksey Dolinko, Director of FP\&A
BERMUDA WATER COMPANY
500 W. Monroe Street, Suite 3600
Chicago, Illinois 60661
Phone: (847) 498-6440 (ext. 3208)
E-mail: Aleksey.Dolinko@greatbasinwaterco.com
Jeffrey W. Crockett, Esq.
CROCKETT LAW GROUP PLLC

E-mail: jeff@jeffcrockettlaw.com
All discovery, data requests and other requests for information concerning this Application should be directed via e-mail to Messrs. Dolinko, Twomey and Crockett with copies via e-mail to James Eason at James.Eason@greatbasinwaterco.com and Stella Wolfson at stella.wolfson@greatbasinwaterco.com.
5. BWC's present rates and charges were approved by the Commission in Decision 77976 (April 29, 2021) using a test year that ended September 30, 2019.
6. Revenues from BWC's utility operations are presently inadequate to provide the Company a fair rate of return on the fair value of its utility plant and property devoted to public water utility service, which has increased significantly since the last rate case. In addition, increases in the Company's operating expenses have outpaced increases in revenues since the last rate case. These changes since the test year in the prior rate have caused the revenues produced by the current rates and charges for water utility service to become inadequate to meet
operating expenses and provide a reasonable rate of return for BWC. Therefore, BWC requests that adjustments to its rates and charges for utility service be approved by the Commission as set forth herein so that the Company may recover its operating expenses and have an opportunity to earn a just and reasonable rate of return on the fair value of its property.
7. Original cost rate base is used as fair value rate base ("FVRB") in this proceeding to minimize disputes and reduce rate case expense.
8. Filed with this Application as Attachment 8 are the schedules required pursuant to A.A.C. R14-2-103. The test year utilized by BWC in preparing the schedules is the 12-month period that ended June 30, 2022. The Company requests that the Commission utilize the proposed test year in connection with this Application, with appropriate adjustments to obtain a normal and more realistic relationship between revenues, expenses and rate base during the period the rates approved in this docket will be in effect.
9. The proposed FVRB for BWC's adjusted rate base is $\$ 17,412,912$. During the test year, BWC's adjusted gross revenues were $\$ 5,358,148$. The adjusted operating income was $\$ 769,701$, leading to an operating income deficiency of $\$ 1,137,013$. Thus, the rate of return during the test year was $4.42 \%$.
10. The overall rate of return to BWC is too low to allow the Company to pay reasonable dividends, maintain a sound credit rating, and to enable it to attract additional capital on reasonable and acceptable terms in order to continue the investment in utility plant necessary to adequately serve customers.
11. BWC is requesting an increase in gross revenues equal of $\$ 1,534,633$, representing an increase in revenues of approximately $28.6 \%$. The adjustments to the Company's rates and charges that are proposed herein, when fully implemented, will produce a rate of return on the fair value rate base equal to $10.95 \%$.
12. As shown on Schedule H-2, page 1, the present monthly bill for a $5 / 8$-inch metered customer using an average of 7,144 gallons per month is $\$ 33.58$. The proposed monthly bill for a $5 / 8$-inch metered customer using an average of 7,144 gallons per month would be $\$ 43.18$, an increase of $\$ 9.60$, or approximately $28.59 \%$ above present rates.
13. BWC is not proposing any changes to the overall structure of its rate design as the Company believes the current structure is appropriate. Base rates escalate as meter size increases, and most customer classes have multiple tiers for volumetric rates. The largest customer class-residential customers-has a three-tier rate structure. The proposed new rates result in $43.4 \%$ of revenues being recovered from base rates and $56.6 \%$ from volumetric charges.
14. In addition to the requested increase in rates, BWC is requesting increases to certain of its charges, as follows:

- Broken Meter Lock Charge-increase from $\$ 15.00$ to $\$ 100.00$
- Establishment Fee-increase from $\$ 35.00$ to $\$ 50.00$
- After Hours Service Charge-increase from $\$ 30.00$ to $\$ 150.00$
- Meter Re-Read Charge (if correct)-increase from $\$ 10.00$ to $\$ 50.00$.

BWC is also proposing to remove the interest charge for customer deferred payment arrangements. The reasons for these changes in charges are discussed in the testimony of Company witness Aleksey Dolinko. BWC is not requesting any changes to its current meter and service line installation charges. Revised copies of current Tariff Sheets 4.1 and 5.1 with various revisions are attached hereto as Attachment 9 .
15. Attached as Attachment 1 is BWC's inventory of major plant-in-service.
16. Attached as Attachment 2 is BWC's completed Water Use Data Sheet.
17. Filed in support of this Application as Attachment 3 is the Direct Testimony of Aleksey Dolinko, BWC's Director of Financial Planning and Analysis. Mr. Dolinko is testifying in support of the Company's requested increases in rates and charges for water utility service and is sponsoring Schedules "A," "C," "D," "E," "F," and "H. Consistent with prior BWC rate applications, the Company has not conducted a cost-of-service study is not providing " G " Schedules. Because most of BWC's revenue comes from the residential customer class, the Company did not want to drive up rate case expense in order to conduct the study, which would have required an outside consultant.
18. Filed in support of the Application as Attachment 4 is the Direct Testimony of Stella Wolfson. Mr. Wolfson is a Senior Analyst of Financial Planning and Analysis for BWC.

She is sponsoring the "B" Schedules, Schedule "E-5" and Schedule "E-5 Accum Depr."
19. Filed in support of the Application as Attachment 5 is the Direct Testimony of James Eason, Director of State Operations for the Western Region, which includes BWC in Arizona and Great Basin Water Company in Nevada. Mr. Eason provides an overview of BWC's operations and the Company's continued efforts to provide customers with the best possible water utility service. He describes capital improvement projects that have been completed by BWC since the last rate case and projects that will be completed and in service within 12 months from the end of the test year. Mr. Eason also provides additional support for the Company's application to increase its rates and charges.
20. Filed in support of the Application as Attachment 6 is the Direct Testimony of Jared Deason, Regulatory Manager for Sunshine Water Services, sister company to BWC. Mr. Deason provides testimony regarding the cost of common equity that will allow the Company the opportunity to earn a fair return on its prudently invested capital.
21. Finally, filed in support of the Application as Attachment 7 is the Direct Testimony of Harold Walker, III, Manager, Financial Studies, for Gannett Fleming Valuation and Rate Consultants, LLC. Mr. Walker presents the results of his lead-lag study and recommends an appropriate cash working capital allowance for inclusion in BWC's rate base.

WHEREFORE, Bermuda Water Company, Inc., requests the following:
A. That the Commission, upon proper notice and at the earliest possible time, conduct a hearing in accordance with A.R.S. § 40-251 and determine the fair value of BWC's utility plant and property devoted to providing water utility services to the public;
B. Based upon such determination, that the Commission approve permanent adjustments to the rates and charges for water utility service provided by BWC, as proposed by the Company herein, or approve such other rates and charges as will produce a just and reasonable rate of return on the fair value of BWC's utility plant and property, with new rates to be effective as soon as possible, but no later than October 31, 2023; and
C. That the Commission authorize such other and further relief as may be appropriate to ensure that BWC has an opportunity to earn a just and reasonable return on the fair
value of its utility plant and property and as may otherwise be required under Arizona law.
RESPECTFULLY submitted this 30th day of September, 2022.

DIRECT TESTIMONY OF
ALEKSEY V. DOLINKO ON BEHALF OF

BERMUDA WATER COMPANY, INC.
SEPTEMBER 30, 2022

## TABLE OF CONTENTS

I. INTRODUCTION AND QUALIFICATIONS ..... 1
II. OVERVIEW OF THE COMPANY'S APPLICATION. ..... 2
III. SUMMARY OF "A", "E", and "F" SCHEDULES ..... 3
IV. SUMMARY OF INCOME STATEMENT ("C" SCHEDULES) ..... 4
V. SUMMARY OF "D" SCHEDULES ..... 17
VI. WATER RATE DESIGN ..... 17

## I. INTRODUCTION AND OUALIFICATIONS

## Q1. STATE YOUR NAME AND BUSINESS ADDRESS.

A1. My name is Aleksey Dolinko. My business address is 500 W . Monroe St, STE 3600, Chicago, IL 60661.

## Q2. WHAT IS YOUR PROFESSION AND BACKGROUND?

A2. I am the Director of Financial, Planning and Analysis supporting Bermuda Water Company Inc. ("the Company" or "BWC"). I have been in this position since late 2016. Before that I worked for Allstate Insurance Co. in various finance roles. I have bachelors' degrees in Finance and Information Decision Science. I also have an MBA from the Chicago Booth School of Business.

## Q3. BRIEFLY SUMMARIZE YOUR PRIOR WORK AND REGULATORY

 EXPERIENCE.A3. I have supported BWC since 2016. I have participated in the following Dockets, including the Company's 2020 Rate Case in Arizona:

$$
\begin{aligned}
& \text { Arizona: W-01812A-18-0231; W-01812A-20-0109 } \\
& \text { Nevada: } 16-12006,16-12037,17-12022,18-03005,18-11014,19-12029,20- \\
& 07005,20-07015,20-07017,21-03042,21-08019,21-08020,21-12025,22-02028 \text {, } \\
& \text { and } 22-08026 .
\end{aligned}
$$

Q4. ON WHOSE BEHALF ARE YOU TESTIFYING IN THIS PROCEEDING?
A4. I am testifying in this proceeding on behalf of the applicant, BWC. BWC is seeking increases in its rates and charges for water service in its certificated service area in Mohave County, Arizona. The proposed increases are necessary in order for the Company to continue to provide safe and reliable water service to its customers while providing an
opportunity to earn a reasonable rate of return on its investments dedicated to utility service.

## II. OVERVIEW OF THE COMPANY'S APPLICATION

Q5. WHAT IS THE PURPOSE OF YOUR DIRECT TESTIMONY?
A5. I will testify in support of the Company's proposed rates for water utility service. I am sponsoring Schedules "A", "C", "D", "E", "F", and "H". These schedules were prepared by me or under my direction. Consistent with prior rate cases, the Company has not conducted a cost-of-service study. It thus has not populated the " $G$ " Schedules. Most of the revenue comes from the residential customer class, and as such, BWC did not feel the need to drive up rate case costs to conduct this study, which would require an outside consultant.

## Q6. WHAT TEST YEAR DOES THE COMPANY USE?

A6. The test year used by the Company is the 12-month period that ended June 30, 2022.

Q7. DID THE COMPANY SELECT THE TEST YEAR?
A7. Yes.

Q8. DOES THE COMPANY HAVE POST-TEST YEAR CAPITAL?
A8. Yes, we are asking for 12 months of Post-Test Year Capital.

## Q9. PLEASE SUMMARIZE THE COMPANY'S APPLICATION.

A9. As stated above, the Company is utilizing a June $30^{\text {th }}, 2022$ test year which is nearly three years after the test year for the previous rate case. Since then, the Company made
significant investment in infrastructure and saw increases in costs. The revenue increase requested in this rate case is just over $\$ 1.5$ million. While the company is not recommending a change in rate design, BWC is recommending changes to Miscellaneous revenues that increase the underlying test year revenues, thus slightly reducing the increase needed from base and volumetric rates.

In this rate case, the Company is also introducing two extra witnesses, compared to prior rate cases:

1. Jared Deason is the Company's witness for the Return on Common Equity. Please note that this is the first time in at least 12 years that the Company has provided expert witness testimony on this topic.
2. Harold Walker is the Company's witness for the Working Cash Requirement (Schedule B-5). This expert witness testimony is required by the Commission based on its decision in the Company's 2020 Rate Case.

## III. SUMMARY OF "A", "E", AND "F" SCHEDULES

Q10. PLEASE DESCRIBE SCHEDULES "A".
A10. Schedule A-1 is the summary of Rate Base and Rate of Return along with Present and Proposed Revenues. Schedule A-2 summarizes the Income Statement with historical and proposed results. Schedule A-3 is the Company's capital structure, which has remained unchanged from previous rate cases. Schedule A-4 contains the capital spending levels, including future projections. Schedule A-5 is a summary of cash flows for historical and future years.

## Q11. PLEASE DESCRIBE SCHEDULES "E".

A11. Schedules E-1 through E-4 contain summaries of financial statements for the test year and the preceding two years. Schedule E-5 is specific to Net Plant in Service, showing the
change during the test year. Schedule E-5 is discussed in detail in Stella Wolfson's Direct Testimony.

Q12. PLEASE DESCRIBE THE "F" SCHEDULES.
A12. Schedules F-1 and F-2 show financial statements for the test year and projected year at both present and proposed rates. Schedule F-3 shows future capital/construction needs for the Company. Schedule F-4 includes the assumptions used in creating the projected results.

## IV. SUMMARY OF INCOME STATEMENT ("C" SCHEDULES)

Q13. EXPLAIN THE ADJUSTMENTS YOU ARE PROPOSING TO THE INCOME STATEMENT AS SHOWN ON SCHEDULES C-1 AND C-2.

A13. Numerous adjustments are being made and can be seen in detail in Schedule C-2. I will describe the adjustments.

## Q14. WHAT IS ADJUSTMENT 1?

A14. This adjustment annualizes salaries, payroll taxes, and 401 K . The headcount used for this adjustment is active employees on June 30, 2022.

## Q15. WHAT IS THE COMPANY'S COMPENSATION PHILOSOPHY?

A15. BWC strives to keep costs down, but we have a duty to our customers to have a talented team in place to provide service - now and into the future. BWC must be competitive in the national, regional, and local markets to attract and retain the best talent. Attracting and retaining top talent has always been challenging and has not gotten any easier over the past two years. The Company compensation structure for employees includes some or all the
following - base pay, benefits (health insurance, leave, retirement), variable pay, and other compensation such as signing bonus, retention bonus, relocation fees, and severance.

Q16. PLEASE DESCRIBE THE DIFFERENT COMPONENTS THAT RESULT IN THE ADJUSTMENT.

A16. There are two primary changes in the amount of compensation that BWC employees receive as compared to the last rate case:

1) Market Wage Adjustment
2) On-Call Pay

## Q17. PLEASE DESCRIBE THE MARKET WAGE ADJUSTMENT?

A17. Market wage adjustments were made to Field Operations positions only. The increase in the entry point position was made to the Operator I position.

Q18. HOW IS THE PAY RANGE SET FOR BWC EMPLOYEES?
A18. When we established our first pay grades in 2017, we started by grouping our entry-level roles and identifying a common market midpoint. We used that data point to establish the midpoint for what became Grade 1 and set a minimum and a maximum of the grade based on math.

Once the appropriate minimum, midpoint and maximum for Grade 1 were determined, we followed best practices from the Society of Human Resources Management to establish the midpoints/ranges for our hourly grades (Grade 1 - Grade 8) and our salaried grades (Grade 9 - Grade 16).

After we conducted compensation research to identify the market midpoint for each of our positions, we aligned each position to the Corix Pay Grade closest to the market midpoint for the position.

Q19. WHAT DID THE CORPORATE SUPPORT SERVICES TEAM SET THE ENTRY POINT COMPENSATION AT?

A19. The Corporate Support Services team in conjunction with the Senior Leadership Team set the entry point compensation at $95 \%$ of the midpoint.

Q20. WHY DID THE CORPORATE SUPPORT SERVICES TEAM DECIDE ON MAKING THE ENTRY POINT COMPENSATION 95\% OF THE MIDPOINT?

A20. Our compensation philosophy as an employer is to pay an employee at the market midpoint (or P50) when the employee meets all the job requirements and can perform them competently. With our market midpoint pay philosophy in mind, we established entry points that were reflective of the time it would take for an employee without experience to become competent at the job, based on the requirements of our job descriptions. For example, in the job description for an Operator I it describes the experience necessary:
"Requires two to four years of mechanical experience, including at least one year specializing in chemical treatment of water and/or wastewater and/or a minimum of one year in the water and/or wastewater utility field with experience in operation and maintenance of groundwater supplied water systems and associated distribution systems."

We extrapolate from this requirement that two years of experience are required to perform the job competently. By positioning an employee at an entry point equal to $95 \%$ of the midpoint, we expect them to gain the knowledge necessary to complete the job competently over two years. In doing so, they will likely receive performance-based merit increases
between two and four percent ( $2 \%-4 \%$ ) each year, moving them over time to the midpoint. The .95 compa-ratio also accounts for the midpoint's likelihood of being aged and moving over that period too.

Ultimately, the entry-point starts an inexperienced employee within appropriate striking distance of the market midpoint so that when they become competent at their position, they are compensated appropriately.

Q21. WHY IS NOW THE RIGHT TIME TO MAKE THIS MARKET ADJUSTMENT?
A21. Multiple factors make now the right time to complete market adjustments for the Operations Team:

1) To remain competitive within the job market in our industry. The most recently published AWWA Compensation Survey Data identified new market midpoints for our operator roles. The study also identified a jump in compensation of more than ten percent (10\%) for our Operator I position since our last compensation review. Our compensation philosophy is to compete with the market. While our midpoints reflect the market, our actual pay among our operations employees (Field Techs, Operators) is currently lagging the market midpoint.
2) To remain competitive within the job market across other industries. With COVID19, in general, there is a lot of volatility within the job market. We see hourly positions within retail, quick-service restaurants and other industries increase significantly as the economy recovers and employers raise hourly wages to overcome labor shortages.

Regarding entry-level talent, the list of industries that we compete against for talent has expanded. Other industries are also interested in the types of candidates that we
hire for our Field Tech and Operator roles. Ensuring we are paying competitively at the time of hire and appropriately based on the work being performed ensures we can attract and retain talent.
3) Appropriately value new and recent hires relative to their experience and the market. By moving employees to the entry point, we are placing our entry-level employees in appropriate proximity to the midpoint based on their skills and experience. It is a priority to do so as soon as possible to ensure we retain them and pay them appropriately when they become entirely competent within their positions and perform them capably.
4) To continue to provide uninterrupted service, our Field Operations Team members are the most critical members of our team. When the state went into various lockdowns during the pandemic, our operations team continued to report to work when most of the workforce went to remote work - without these employees BWC would not be able to provide this essential service to the communities in which we operate.
5) To reduce field employee turnover and in turn our hiring expenses. Our most critical staff are our field staff-improved pay helps reduce staff turnover.

## Q22. PLEASE DESCRIBE THE ON-CALL PAY ADJUSTMENTS?

A22. In early 2022 we updated the On-Call policy to reflect the following: each day that an employee is on call, they will receive one hour per day at their overtime rate. For example, if an employee making $\$ 18.00$ /hour was On-Call on a given day, he would receive $\$ 27.00$ ( $\$ 18.00$ time 1.5) in compensation for being on call. If the following day a different employee was On-Call, whose base wage was $\$ 20.00$, this second employee would receive
$\$ 30.00$ ( $\$ 20.00$ times 1.5 ) in On-Call pay. Additionally, each On-Call call out has a twohour minimum for compensation purposes.

Q23. HOW IS THIS DIFFERENT THAN THE PREVIOUS ON-CALL COMPENSATION?

A23. Previously, all on-call pay was set to $\$ 15 /$ day regardless of the employee's base compensation. Please note that $\$ 15 /$ day was below the hourly wage for all employees.

Q24. DOES THIS NEW POLICY LEAD TO AN INCREASE IN BOTH ON-CALL PAY AND OVERTIME AS COMPARED TO PRIOR RATE CASES?

A24. Yes, overtime and On-Call pay have increased due to the new policy.

## Q25. WHY DOES ON-CALL PAY EXIST?

A25. On-Call pay exists to recognize employees and compensate them for their reduced freedom outside of regular business hours, including weekends. For example, an On-Call employee may be called out at 2:00 AM to fix a pipe break, respond to a customer emergency, or inspect a well to make sure it is operating correctly after receiving a SCADA alarm. When On-Call, employees cannot leave town and must be close to the system for which they are responsible.

Q26. WHERE THE MARKET AND ON-CALL PAY ADJUSTMENTS ISOLATED TO ONLY BWC?

A26. No. These change were implemented across all sister companies in all states where Corix Regulated Utilities operates.

Q27. IS THE COMPANY REQUESTING RECOVERY OF VARIABLE PAY FOR THE FOLLOWING THREE POSITIONS: SENIOR VICE PRESIDENT, PRESIDENT AND DIRECTOR OF STATE OPERATIONS?

A27. Yes, the Company is requesting recovery of the Short-Term Inservice Plan ("STIP") for the abovementioned positions. STIP exists to incentivize individuals to drive positive results, have economic advantages, and help with recruitment, retention, motivation, and communication of essential priorities such as safety in the workplace. This variable pay component needs to be re-earned every year.

Q28. CAN YOU PROVIDE MORE DETAIL REGARDING WHY THE COMPANY OFFERS STIP?

A28. There are several reasons why the Company offers STIP/variable pay.

## Economics

One of the most significant advantages of variable pay is transferring of a portion of the employee's fixed costs, in the form of salary, to a variable cost incurred if the employee and the Company achieve desired results. Converting what would otherwise be fixed costs into variable costs provides significant benefits because if the individual employee and/or Company cannot sustain positive performance, variable pay can be reduced or eliminated.

## Recruitment and Retention

For Corix (BWC's parent company) to attract the highly skilled workforce required to maintain safe and reliable service, we need to be competitive. Variable pay is part of most senior-level compensation packages in the industry. Retention of talent is improved with variable pay programs as there is clear communication of the Company's expectations for the employee. They know where to focus their efforts and which achievements are rewarded.

## Motivation and Business Goals

The motivational potential of variable pay is more robust than other forms of compensation. If the Company sets goals beneficial to the customers - as Corix does - then the benefits are clear to customers. Corix has five strategic drivers to which variable pay is tied: Customers and Stakeholders, Operational and Service Excellence, People and Culture, Financial Performance, and Strategic Initiatives. These strategic drivers are measured at both the Corporate and Business Unit Levels. When the Corporate and BU scores are combined with the employee's score, they make up the Variable pay formula's three metrics.

## Communication

Variable pay is one of the most vital signals an organization can send to its leadership team about what is essential. The strategic objectives set for the Company and its Business Units make the year's targets clear and understood.

## Q29. PLEASE DESCRIBE ADJUSTMENT 2.

A29. These are the adjustments to true up the CIAC Amortization and Depreciation Expense to current annualized levels from the recorded test year.

There are several types of adjustments:

1) Post Test Year Capital - since the assets will be in service and depreciating before the rates for this rate case are effective, they are included in the calculation of depreciation expense.
2) Removal of Allocated Assets - while the asset values are allocated to BWC and appear as part of Plant-In-Service, the depreciation of these assets is recorded as a Corporate Allocation. As such, the asset values in our pro-forma calculations would have resulted in a double recovery of the depreciation expense. Thus, they were removed.
3) Inclusion of Pro-forma retirement adjustments - since our pro-forma retirement adjustments reduce the amount of Plant-In-Service, it is appropriate to include these negative adjustments and reduce the required depreciation levels.
4) Transportation Equipment - this account is not treated as a group asset, as each vehicle is treated separately and stops depreciating at the end of its useful life. Adjustment is necessary so as not to over-collect depreciation expenses from customers.

Q30. PLEASE DESCRIBE HOW THE CIAC AMORTIZATION PERCENTAGE IS CALCULATED?

A30. Since the CIAC rate is applicable to dedicated assets, only account numbers that contain the generally dedicated asset types are included in the computation of a blended CIAC amortization rate.

Q31. PLEASE DESCRIBE ADJUSTMENT 3.
A31. Adjustment 3 requests the appropriate level of Corporate Allocations. These adjustments ensure that the Company is requesting the appropriate amount of going-forward expenses and not requesting certain Corporate costs. Examples of Corporate costs that BWC is not seeking recovery for are Business Development, Corporate Donations, and Advertising and Marketing.

Q32. HAS BWC REQUESTED CORPORATE ALLOCATIONS AS PART OF A PREVIOUS RATE CASE?

A32. Yes, the Company requested corporate allocations recovery in the 2020 Rate Case (Docket W-01812A-20-0109). The Direct Testimony of Shawn Elicegui supported the request. In Direct and Surrebuttal testimony, Commission Staff did not recommend any adjustments to BWC's Corporate Allocations.

Q33. PLEASE DESCRIBE HOW CORPORATE ALLOCATIONS ARE ALLOCATED TO BWC.

A33. There are two affiliated entities that allocated costs to BWC in the test year: Corix Infrastructure Inc. ("CII") and Water Service Corp ("WSC"). CII contains costs from the Canadian headquarter offices, while WSC contains costs from US Support Services offices. The costs are pooled together and then allocated using a two-tier allocation methodology. The Tier 1 Allocation is based on the Modified Massachusetts Model and is consistent with the methodology of the last BWC rate case. Because different departments in CII and WSC support different parts of the operating business, the department-specific allocations may vary but are still based on the Tier 1 allocation. Once Tier 1 allocations are complete, Tier 2 allocations are made. Consistent with the previous BWC rate case, Tier 2 allocations are based on Equivalent Residential Connections ("ERC"). The current methodology, where the costs for CII and WSC are pooled and allocated using both Tier 1 and Tier 2 allocations, has been in place since January 2021. This is slightly different from the approach that was in place in 2019 and 2020, where CII costs were allocated using both tiers while WSC costs were allocated using only the Tier 2 methodology. Please note that during the test year, Bermuda ERCs grew at a faster rate than ERCs in other entities receiving the Tier 2 allocation. The going forward allocation factor is $3.41 \%$. For comparison, if the Allocation factor was computed using July 2021 (beginning of our test year) it would have been $3.35 \%$. That is an increase of $2 \% .{ }^{1}$

## Q34. PLEASE DESCRIBE ADJUSTMENT 4.

A34. Adjustment 4 is an insurance annualization adjustment. This is a relatively minor adjustment of only a $\$ 594.00$ increase from recorded test year results. The adjustment is computed by looking at each insurance policy and calculating the going-forward expense

[^0]after allocations. In general, the Company's policies have not materially changed since the last rate case.

## Q35. PLEASE DESCRIBE ADJUSTMENT 5.

A35. Adjustment 5 is the annualization of Chlorine costs. Over the last few years, the price of chlorine has drastically increased. The price in August 2022 was up $31 \%$ from a year earlier. To calculate the going-forward cost of chlorine, BWC calculated the total quantity of chlorine purchased during the test year and applied the most recent price to it. BWC then added the appropriate taxes and environmental fees. Additionally, during the test year, the Company incurred a net balance of $\$ 745.00$ in Container Deposits. As this will eventually go down to zero, the Company did not include this $\$ 745.00$ in its recovery request.

## Q36. PLEASE DESCRIBE ADJUSTMENT 6.

A36. Adjustment 6 is an adjustment to property taxes and this is the first time the Company is requesting an adjustment of this type in its direct case. In the 2020 rate case, Staff Witness Russ Ullinger recommended Operating Income Adjustment No. 6 (Property Tax Expense) and the Commission approved a modified version of the Arizona Department of Revenue ("ADOR") property tax methodology. Mr. Ullinger claimed the "Commission has consistently adopted ${ }^{\prime 2}$ this revised version. BWC is utilizing the same approach as Staff recommended in the previous case in this rate case.

## Q37. PLEASE DESCRIBE ADJUSTMENT 7.

A37. Adjustment 7 is the annualization of Fuel Expenses. Over the course of the test year, the price per gallon of fuel increased from $\$ 3.24 /$ gallon to $\$ 4.93 /$ gallon. BWC recognizes this increased cost but is also not being overly aggressive. For the going-forward calculations,

[^1]the Company is utilizing a per gallon rate of $\$ 4.27$, which is $14 \%$ below the price at the end of the test year.

Q38. PLEASE DESCRIBE ADJUSTMENT 8.
A38. Adjustment 8 is an adjustment to decrease the amount of gain on sale from the test year associated with the sale of scrap metal and vehicles, as described in Ms. Wolfson's Direct Testimony. This also reflects the amortization of the Regulatory Liability requested for the above-mentioned Regulatory Liabilities. Please see Direct Testimony of Stella Wolfson for the Rate Base adjustment request.

Q39. PLEASE DESCRIBE ADJUSTMENT 9.
A39. This adjustment reflects the amortization of the Loss on Sale of Northbrook Office Regulatory Asset. Please refer to Direct Testimony of Stella Wolfson for the Rate Base adjustment request.

Q40. PLEASE DESCRIBE ADJUSTMENT 10.
A40. As discussed later in my Direct Testimony, BWC is proposing several changes to Miscellaneous Revenues. The net result of these proposed changes is an increase to test year revenues of just over $\$ 27,000$.

Q41. PLEASE DESCRIBE ADJUSTMENT 11.
A41. Adjustment 9 is the annualization of revenues. The approach is consistent with prior filings and results in an increase to test year revenues of approximately $\$ 25,000$, which in turn reduces by the same amount the required revenue increase.

Q42. PLEASE DESCRIBE ADJUSTMENT 12.
A42. Adjustment 12 is the necessary adjustments to interest expense, IDC, and Income Taxes. Both interest expense and IDC are reduced to zero, as has been done in previous rate cases. Income taxes are recalculated to account for the new levels of Operating Income and the most recent Federal and State Income taxes. Additionally, taxes are adjusted downward to reflect the offset to federal income taxes of the Excess Accumulated Deferred Income Tax ("EADIT") Regulatory Liability.

Q43. PLEASE DESCRIBE ADJUSTMENT 13.
A43. This adjustment requests recovery of costs from the current rate case to be amortized over three years. The Company expects the total cost of this rate case to reach $\$ 166,000$. That is broken into four main categories:

1) Legal Fees - $\$ 50,000$
2) Captime - $\$ 60,000$
3) Lead Lag Study Expert - $\$ 50,000$
4) Admin and Travel - $\$ 5,000$

I note that the Company does not hire an outside expert to pull together all the schedules. The work to pull all the schedules together is done by myself and the two analysts on my team. The majority of the cap time is for these employees.

Q44. PLEASE PROVIDE MORE DETAIL REGARDING THE EXCESS ADIT REGULATORY LIABILITY?

A44. When the 2017 Tax Cuts and Jobs Act became effective, it lowered the Federal Income Tax rate from $35 \%$ to $21 \%$. In turn, this resulted in a decrease of Accumulated Deferred Income Taxes ("ADIT"). A reduction in ADIT is an increase in Rate Base. To ensure that customers did not see an increase in Rate Base, the Company recorded a Regulatory Liability. The Regulatory Liability is comprised of two components: Unprotected and

Protected. Each one has its own useful life. The useful life of the Unprotected portion was set to three years, while the Protected was set to the remaining useful life of the assets. Both Regulatory Liabilities started to amortize in mid-2018 when the new rates were implemented to reflect the lower Federal Income Taxes. Due to the three-year amortization life of the Unprotected Regulatory Liability, it is no longer amortizing, and as such, the only remaining amortization is for the Protected portion.

## V. SUMMARY OF "D" SCHEDULES

Q45. WOULD YOU PLEASE DISCUSS THE "D" SCHEDULES?
A45. Schedules D-1 and D-2 show the summary equity and short-term and long-term debt position for the Company. Schedule D-3 does not apply to the Company. Schedule D-4 shows the Cost of Equity recommended by the Company: 10.95\%. Company witness Jared Deason explains how the cost of equity was calculated in his direct testimony. Mr. Deason is also BWC's Cost of Capital Witness.

## VI. WATER RATE DESIGN

Q46. WHERE CAN THE COMPANY'S PRESENT AND PROPOSED RATES FOR WATER SERVICE BE FOUND?

A46. The Company's present and proposed rates are shown in Schedule H-3.

Q47. IS THE COMPANY PROPOSING A CHANGE IN THE OVERALL DESIGN OF THE RATE STRUCTURE.

A47. No. The Company believes that the overall structure is appropriate. Base rates are escalated as meter size increases, and most customer classes have multiple tiers for volumetric rates. The largest customer class--residential customers--have a three-tier structure. Proposed rates result in $43.4 \%$ of revenues being recovered from base rates and $56.6 \%$ from volumetric charges. This approach is consistent with the rate structure approved in the last rate case.

Q48. WHAT IS THE IMPACT OF THE COMPANY'S PROPOSED RATES ON A 5/8" METERED RESIDENTIAL CUSTOMER AT AVERAGE USAGE?

A48. The median usage for a residential $5 / 8^{\prime \prime}$ meter customer is approximately 5,000 gallons. The monthly bill for this consumption level will increase from $\$ 31.85$ to $\$ 40.90$, which is less than $\$ 10$ per month.

The average usage for a residential $5 / 8^{\prime \prime}$ meter customer is approximately 7,144 . Under current rates, the average monthly bill is $\$ 33.58$. The average monthly bill will increase to $\$ 43.18$ under proposed rates, which is also under \$10/month.

Q49. IS THE COMPANY PROPOSING CHANGES TO SERVICES CHARGES?
A49. Yes, the company is proposing several changes to the Services Charges, found in Section D of the Company's tariffs. The summary of the changes is below:

- Broken Meter Lock charge has been increased from $\$ 15.00$ to $\$ 100.00$
- The company is removing interest from deferred payment arrangements
- Establishment Fee has been increased from $\$ 35.00$ to $\$ 50.00$
- After Hours Service Charge has been increased from $\$ 30.00$ to $\$ 150.00$
- Meter Re-Read Charge (if correct) has been increased from $\$ 10.00$ to $\$ 50.00$.

Q50. WHY IS THE COMPANY PROPOSING AN INCREASE IN THE BROKEN METER LOCK CHARGE?

A50. The Company feels strongly that tampering with Company property should be penalized more than $\$ 10.00$. Thus, we are increasing the charge to a more punitive value.

Q51. PLEASE EXPLAIN YOUR PROPOSAL FOR REMOVING THE INTEREST FOR DEFERRED PAYMENT ARRAGEMENTS?

A51. BWC would like to encourage those customers that fall behind on their bills to set up payment deferred arrangements and having an interest component discourages that.

Q52. HOW DID THE COMPANY COME UP WITH THE $\$ 50.00$ AMOUNT FOR ESTABLISHMENT OF SERVICE?

A52. Establishment of service requires both operations and office staff time. The increased $\$ 50.00$ charge is roughly equivalent to one hour of fully loaded costs (salary, payroll taxes, benefits, etc.) for a BWC employee. This is roughly the amount of time that it takes to establish a new service connection.

Q53. PLEASE EXPLAIN THE PROPOSED INCREASE TO THE AFTER HOURS SERVICE CHARGE?

A53. An after hours call requires a minimum of two hours at time-and-a-half since it is after regular working hours. We took the current $\$ 50.00$ hourly charge and multiplied it by 1.5 and then again by 2 to arrive at a cost of $\$ 150.00$.

Q54. HOW DID YOU DETERMINE THE METER RE-READ CHARGE?
A54. The work required for a meter re-read is roughly identical to the work required to establish service, so we set the charge the same.

Q55. HOW DO THE CHANGES IN SERVICE CHARGES IMPACT REVENUES?
A55. During the test year, BWC saw revenues from Establishment Fees, NSF Check Charges, and Reconnect (Delinquent) Charges. Out of these three charges, only the Establishment Fee is increasing. This increase leads to the increase of Misc. Operating Revenues of $\$ 27,180$ and is found as adjustment \#9 on the C-2 schedule.

Q56. IS BWC PROPOSING ANY CHANGES TO THE METER AND SERVICE LINE INSTALLATION CHARGES?

A56. BWC is recommending no changes to Meter and Service Line Installation charges.

Q57. DOES THAT CONCLUDE YOUR DIRECT TESTIMONY?
A57. Yes.

Bermuda Water Company, Inc.
Docket W-01812A-22-
Test Year Ended June $\overline{30,2022}$

## Attachment 4

## Direct Testimony of Stella Wolfson

## BEFORE THE ARIZONA CORPORATION COMMISSION

## COMMISSIONERS

LEA MÁRQUEZ PETERSON, Chairwoman
SANDRA D. KENNEDY
JUSTIN OLSON
ANNA TOVAR
JIM O'CONNOR

IN THE MATTER OF THE APPLICATION OF BERMUDA WATER COMPANY, INC., AN ARIZONA CORPORATION, FOR A DETERMINATION OF THE CURRENT FAIR VALUE OF ITS WATER UTILITY PLANT AND PROPERTY AND FOR INCREASES IN ITS RATES AND CHARGES FOR WATER UTILITY SERVICE.

DOCKET NO. W-01812A-22- $\qquad$

DIRECT TESTIMONY OF
STELLA WOLFSON
ON BEHALF OF BERMUDA WATER COMPANY, INC.

SEPTEMBER 30, 2022

## TABLE OF CONTENTS

## I. INTRODUCTION AND QUALIFICATIONS

II. PURPOSE OF DIRECT TESTIMONY ..... 2
III. SCHEDULE B-2 RATE BASE ADJUSTMENTS ..... 3
IV. CONCLUSION ..... 12

## I. INTRODUCTION AND QUALIFICATIONS.

## Q1. STATE YOUR NAME AND ADDRESS.

A1. My name is Stella Wolfson. My business address is 1005 Terminal Way, Suite 294, Reno, NV 89502.

## Q2. WHAT IS YOUR PROFESSION AND BACKGROUND?

A2. I am the Senior Analyst of Financial Planning and Analysis ("FP\&A") for Bermuda Water Co. ("BWC" or the "Company") and the Great Basin Water Co. in Nevada. I graduated from California State University, Fullerton in 1998 with a bachelor's Degree in Accounting and became a licensed Certified Public Accountant with the State of California in 2001.

## Q3. BRIEFLY SUMMARIZE YOUR PRIOR WORK AND REGULATORY EXPERIENCE.

A3. I have worked for BWC since November 2019. Before joining BWC, I worked for Verizon Wireless for 16 years, where I started as a Financial Analyst and left the company as an Associate Director of FP\&A. Since joining BWC, I have prepared/assisted in several regulatory filings in Arizona and Nevada and have provided testimony in the following Dockets:

Nevada: 21-05024, 21-06009.

Q4. ON WHOSE BEHALF ARE YOU TESTIFYING IN THIS PROCEEDING?
A4. I am testifying in this proceeding on behalf of the applicant, BWC, who is seeking increases in its rates/charges for water service in its certificated service area in Mohave County, Arizona.

## II. PURPOSE OF DIRECT TESTIMONY

Q5. WHAT IS THE PURPOSE OF YOUR DIRECT TESTIMONY?
A5. I am sponsoring Schedules "B", "E-5", and "E-5 Accum Depr", which were prepared by me (or under my direction) for the 12-month test year period ended June 30, 2022.

## Q6. PLEASE DESCRIBE SCHEDULES "B".

A6. The schedules are as follows:

- Schedule B-1 is the summary of original cost rate base at end of the test year plus proforma adjustments.
- Schedule B-2 contains a summary of the proforma adjustments made to rate base. Details of proforma adjustments are explained in Section IV of testimony.
- Schedule B-3 is not applicable to this rate case as BWC is requesting that its original cost rate base ("OCRB") be used as its Fair Value Rate Base ("FVRB").
- Schedule B-4 is not applicable to this rate case as BWC is requesting that its original cost rate base ("OCRB") be used as its Fair Value Rate Base ("FVRB").

Q7. PLEASE DESCRIBE SCHEDULES "E-5" AND "E-5 ACCUM DEPR".
A7. The schedules are as follows:

- Schedule 'E-5' is specific to Plant in Service and shows the net change by account by year (ended June $30^{\text {th }}$ ) since the last rate case filing.
- Schedule 'E-5 Accum Depr' is specific to the accumulated depreciation (for Plant in Service accounts) and shows the net change by account by year (ended June $30^{\text {th }}$ ) since the last rate case filing.

## III. SCHEDULE B-2 RATE BASE ADJUSTMENTS

Q8. WHAT ARE THE RATE BASE ADJUSTMENTS IN THIS RATE CASE?
A8. There are six rate base adjustments in this rate case:

1) Post Test-Year Capital - detailed discussion in the Direct Testimony of Mr. James Eason
2) Meter Retirements
3) Project Retirements
4) Loss on Northbrook Office
5) Gain on Sale of Assets
6) FUSION

## RB Adjustment \#1: Post Test Year Capital

Q9. HOW MANY MONTHS OF POST TEST YEAR (TY) CAPITAL IS THE COMPANY SEEKING?

A9. The Company is requesting 12 months of post-test-year capital projects as consistent with the prior rate case filing (Docket No. W-01812A-20-0109) and approved in Decision No. 77976.

Q10. WAS ACCUMULATED DEPRECIATION ADJUSTED AS PART OF THESE ADJUSTMENTS?

A10. Yes. The Company used a $1 / 2$ year depreciation convention (associated with these projects) to calculate proforma accumulated depreciation for a decrease to Rate Base.

Q11. WHY IS 'BWC REHAB TANKS 1 -4' PROJECT INCLUDED AS A POST TY ADJUSTMENT IF THE PROJECT WAS CLOSED DURING THE TY?

A11. The $\$ 110,815$ of post TY cost for this project is because BWC did not process and pay the final invoice in the amount of $\$ 110,815$ from Superior Tank Solutions ("STS") by $06 / 30 / 2022$. While preparing BWC's rate case filing, it was identified that BWC had not received nor paid STS' final invoice (based on STS' bid of $\$ 1,108,150$ for this project). On $09 / 20 / 2022$, BWC confirmed with STS that STS is pending a final payment of $\$ 110,815$. STS submitted the final invoice on $06 / 07 / 2022$ but sent it to an incorrect accounts payable e-mail address for BWC. The final invoice was sent to AP's correct email address on $09 / 20 / 2022$ and will be processed/paid by $10 / 31 / 2022$. Please note that BWC is not requesting Interest During Construction ("IDC") on STS' $\$ 110,815$ final invoice.

Q12. WHAT IS THE TOTAL COST OF THE 'BWC REHAB TANKS 1 -4' PROJECT AND WHERE CAN PROJECT DETAILS BE FOUND?

A12. The total cost of this project is $\$ 1,144,023$ (including the final invoice of $\$ 110,815$ ) and the project details can be found in the Direct Testimony of Mr. Eason.

Q13. WHERE CAN THE DETAILS OF THE POST TY PROJECTS BE FOUND?
A13. The details of each project requested for post TY capital, can be found in the Direct Testimony of Mr. Eason.

## RB Adjustment \#2: Meter Retirements

Q14. WHAT IS THE PURPOSE OF THIS METER RETIREMENT ADJUSTMENT TO RATE BASE?

A14. This adjustment is due to BWC replacing non-AMR meters with AMR meters. A manual journal entry is required to properly account for the non-AMR meter retirements on the Company's books.

Meter retirement adjustments of \$739,248 (\$678,708 in A/C\#141234 - Meters and \$60,540 in A/C\#141235 - Meter Installations) were submitted in the prior rate case, Docket W-01812A-20-0109. However, due to an oversight, the journal entry of $\$ 739,248$ was not posted to the accounting system in 2020. As such, BWC is carrying forward the $\$ 739,248$ of meter retirements in this rate case filing and posted the journal entry in August 2022. BWC is also retiring an additional $\$ 256,784$ (\$236,982 in A/C\#141234 - Meters and $\$ 19,892$ in A/C\#141235 - Meter Installations) in this rate case filing for the retirement of 1,413 non-AMR meters that were replaced with AMR meters. These retirement amounts are for the period 04/01/2020 through 06/30/2022. This journal entry was not posted in time for the June 30, 2022 test year, but will be posted by September 30, 2022.

Q15. IS THE METHODOLOGY FOR THE ADJUSTMENT IN THIS RATE CASE IDENTICAL TO THE METHODOLOGY IN THE PRIOR RATE CASE?

A15. Yes, the methodology is identical between the rate cases.

Q16. HOW DOES THIS ADJUSTMENT IMPACT RATE BASE?
A16. This adjustment decreases Plant-in-Service by $\$ 996,121$ and Accumulated Depreciation by $\$ 1,109,498$. Consequently, this adjustment has a net $\$ 113,376$ increase to Rate Base, which is made up of two components:

1) $\$ 102,673$ is a true-up due to not booking the retirement in December 2020 (as recommended from the 2020 Rate Case). If the retirement was properly booked in $12 / 2020$, then this amount of depreciation would have never occurred (as the cost for these meters would have been removed from the GL);
2) Pro-forma $\$ 10,703$ for the 1,413 meters installed/retirements from April 1, 2020, through June 30, 2022. This period covers all replacements after the last rate case.

Q17. HOW DOES THIS ADJUSTMENT IMPACT THE REQUESTED DEPRECIATION EXPENSE?

A17. As this adjustment decreases the amount of Plant-in-Service for a group asset, this adjustment decreases the requested annual depreciation expense, which is reflected in Schedules "C" (via IS Adj 2 - Depr\&Amort).

## RB Adjustment \#3: Project Retirements

Q18. PLEASE DESCIBE ADJUSTMENT \#3: PROJECT RETIREMENTS.
A18. During rate case preparation, it was discovered that retirements for the 'BWC Valve Replacement' Capital Project (placed in service on February 28, 2022) had not been booked to the accounting system. As such, an adjustment is necessary to ensure that the correct amount of depreciation expense is collected from customers. This retirement was booked to the accounting system for the accounting period ending August 31, 2022. This decrease in depreciation expense is reflected on Schedules "C" (via IS Adj 2 Depr\&Amort).

Q19. PLEASE DESCIBE ADJUSTMENT \#4: LOSS ON NORTHBROOK OFFICE.
A19. BWC is requesting rate base treatment and a regulatory asset for BWC's allocated portion from the Impairment and Loss on Sale on Corporate's Northbrook Office. The total requested amount of the regulatory asset after allocations is $\$ 17,759$.

Q20. HOW WAS THE ALLOCATED AMOUNT CALCULATED?
A20. At the corporate level, the summation of the Impairment and the Loss on sale is $\$ 735,490$ ( $\$ 708,000$ Impairment plus $\$ 27,490$ Loss on Sale). $\$ 735,490$ is allocated to BWC using a Tier 1 and Tier 2 allocation methodology. The Tier 1 allocation (of $\$ 735,490$ ) to CORIX Regulated Utilities US (CRUUS) is $\$ 520,359$ (or $70.75 \%$ ). Tier 2 then allocates the $\$ 520,359$ based on an Equivalent Residential Connection ("ERC"), which amounts to $\$ 17,759$ (or $3.41 \%$ ) for BWC. BWC is requesting that this asset's place in service date be the $1^{\text {st }}$ day of the first full month after rates are implemented in this case. BWC is requesting an amortization period of three years, which is consistent with amortization periods of other regulatory assets.

Q21. PLEASE REMIND US ON WHAT THE NORTHBROOK OFFICE WAS FOR AND WHY IT WAS VACATED?

A21. Northbrook is a suburb of Chicago and is the location of the old Corporate Office. It housed several shared service departments including, but not limited to, Human Resources, Information Technology, Corporate Accounting, and others. In 2019, the office moved to Chicago, and the Northbrook building was vacated and put up for sale. The Northbrook location had numerous drawbacks, and the new office offered several benefits, both were described in detail in Mr. Dolinko's Direct Testimony in Docket No.

W-01812A-20-0109. Overall, the move improved the morale of shared service employees and provided access to a much larger talent pool, both of which benefit BWC's customers.

Q22. PLEASE EXPLAIN WHY THERE WAS AN IMPAIRMENT ON THE NORTHBROOK OFFICE?

A22. When the Northbrook office was vacated and put on sale in 2019, the company received two offers, both well below asking price. While ultimately, both offers fell through, it was clear that the market value of the building was below the net book value of the asset. As such, Corporate Accounting made a "Lower Cost or Market" adjustment as required by Generally Accepted Accounting Principles (GAAP) and recorded the impairment.

Q23. WHAT HAPPENED WHEN THE BUILDING WAS SOLD?
A23. The sale of the building resulted in an additional Net Loss on Sale.

Q24. DID ERNST \& YOUNG REVIEW AND APPROVE THE TREATMENT OF THE NORTBROOK OFFICE TRANSACTIONS AS PART OF YEAR END AUDIT?

A24. Yes, they reviewed and approved the treatment of the transaction as part of their audit.

Q25. AT THE TIME OF THE LAST RATE CASE, HOW DID THE COMPANY ACCOUNT FOR THE NORTHBROOK OFFICE FOR RATE MAKING PURPOSES?

A25. The last rate case utilized a September 30, 2019 test year, and the asset of the Northbrook Office and the O\&M associated with it were still being allocated to BWC. BWC did not see it fair to charge customers for two office locations (Chicago and Northbrook) and as
such, made a "used and useful" adjustment by removing $\$ 58,000$ in Rate Base and $\$ 5,000$ in Operating Expense from the test year results.

Q26. WHY IS BWC REQUESTING RATE BASE TREATMENT AND A REGULATORY ASSET FOR THIS LOSS?

A26. BWC believes that rate base treatment should be granted for this loss as the Northbrook Office asset and O\&M costs were previously included in the rate base calculation and O\&M cost recovery in rate case filings before 2020. As a reminder, in 2020, BWC made a voluntary "not used and useful" adjustment, to remove the cost of the Northbrook Office from both Rate Base and Income Statement. Also, because of improved working conditions (by moving from Northbrook to Chicago), BWC's customers are receiving the benefit of higher quality service. As such, BWC should not be penalized by recording an out of test year loss on sale, and thus not being able to recover the full value of the original asset.

## Q27. HAS A DIFFERENT JURISDICTION APPROVED THE SAME REQUEST?

A27. Yes, the Public Utilities Commission of Nevada approved the creation of a regulatory asset for all four operating divisions in Nevada (Docket No. 21-12025 on 06/20/2022).

## RB Adjustment \#5: Gain on Sale of Assets

## Q28. PLEASE DESCIBE ADJUSTMENT \#5: GAIN ON SALE OF ASSETS.

A28. BWC is reducing the rate base by $\$ 30,173$ for the gain on the sale of vehicles and scrap metal (related to meter retirements) for 10/01/2019 through 06/30/2022. To be fair and equitable to BWC's customers, it is necessary and appropriate to request a regulatory liability (e.g., base rate reduction) because of requesting regulatory asset treatment for ' RB Adjustment \#4: Loss on Northbrook Office'.

Q29. PLEASE DESCRIBE THE GAIN ON SALE OF VEHICLE SALES?
A29. BWC sold two vehicles totaling $\$ 13,519$.

Q30. PLEASE DESCRIBE THE GAIN ON SALE OF SCRAP METAL SALES?
A30. BWC sold retired non-AMR meters totaling $\$ 16,654$.

Q31. IS THIS TREATMENT SIMILAR TO THE TREATMENT REQUEST OF THE LOSS ON SALE OF THE NORTHBROOK OFFICE?

A31. Yes, as an adjustment to rate base. However, the gain on sale is a reduction to rate base, whereas the loss on sale of the Northbrook Office is an increase to rate base. In both cases, what would be considered under GAAP rules to be either a gain or loss on sale, is being requested for regulatory asset/liability treatment.

## RB Adjustment \#6: FUSION

## Q32. WHAT IS FUSION?

A32. FUSION is an Oracle Cloud solution that replaced the Company's Enterprise Resource Planning (e.g., JD Edwards ("JDE")) and HR/Payroll administration system (e.g., Paychex) in June 2020. Oracle Cloud is a superior product that provides an efficient platform for growth and continuous improvements and empowers end users with modern tools and easy access to information.

JDE was originally installed in 2008 with an expected useful life of 10 years. Continuing with JDE would have resulted in costly upgrades to support and improve business processes, as JDE was an outdated end-of-life system.

Q33. WHERE ARE THE COSTS CURRENTLY RECORDED ON THE COMPANY'S BOOKS?

A33. The costs are currently recorded in FUSION Account 194006: "Other Non-Current Assets". This is the only cost in that account.

Q34. IS THE "OTHER NON-CURRENT ASSET" ACCOUNT AUTOMATICALLY INCLUDED IN RATE BASE?

A34. As this account falls outside the traditional Plant-in-Service Accounts, it is not automatically included in Rate Base calculations.

Q35. WHY IS THE COST OF THIS SOFTWARE NOT RECODED TO AN ACCOUNT THAT IS PART OF PLANT-IN-SERVICE SUCH AS COMPUTER SOFTWARE OR COMPUTER SYSTEMS?

A35. With the evolution of technology, many platforms are moving to "cloud only" options, which allows for many benefits, such as quarterly updates. The two accounts mentioned below have always been used for "On-Premise" solutions.

Q36. DOES IT MAKE ANY DIFFERENCE TO CUSTOMERS WHERE THE COSTS ARE RECODED?

A36. No, there is no difference to the customer where the costs are recorded. BWC has spent money on a better product that can be more easily maintained and will see a benefit over the life of the contract with Oracle. Thus, there is no difference for the customer. Consequently, BWC believes that both a "cloud only" and an "On-Premise" solution should be treated the same by receiving rate base treatment, regardless of the specific account in which the costs are recorded.

## Q37. PLEASE DESCRIBE THE ADJUSTMENT.

A37. As stated above, BWC is requesting rate base treatment and a regulatory asset for BWC's portion of the CRUUS net book value of the asset (e.g., $\$ 7,163,616$ ) for a total of $\$ 244,478$ (which is allocated based on Tier 2 methodology at $3.41 \%$ of ERCs). The asset was placed in service on $06 / 01 / 2020$ with an amortization end date of $03 / 31 / 2029$.

BWC believes that rate base treatment should be approved as FUSION is an improved replacement to the JDE and Paychex systems, and both systems have previously been included in the calculation of rate base in prior rate case filings.

Q38. WHY IS THERE NO CORRESPONDING ADJUSTMENT FOR AMORTIZATION OF THE ASSET ON THE INCOME STATEMENT (SCHEDULES "C")?

A38. Since this is an allocated asset, the amortization of this asset flows through Corporate Allocations and is included in test year results.

## IV. CONCLUSION

Q39. DOES THAT CONCLUDE YOUR DIRECT TESTIMONY?
A39. Yes, this concludes my testimony, however I reserve the right to supplement or make corrections at the time of the hearing in this proceeding.

Bermuda Water Company, Inc.
Docket W-01812A-22-
Test Year Ended June 30, 2022

## Attachment 5

## Direct Testimony of James Eason

## BEFORE THE ARIZONA CORPORATION COMMISSION

## COMMISSIONERS

LEA MÁRQUEZ PETERSON, Chairwoman
SANDRA D. KENNEDY
JUSTIN OLSON
ANNA TOVAR
JIM O'CONNOR

IN THE MATTER OF THE APPLICATION OF BERMUDA WATER COMPANY, INC., AN ARIZONA CORPORATION, FOR A DETERMINATION OF THE CURRENT FAIR VALUE OF ITS WATER UTILITY PLANT AND PROPERTY AND FOR INCREASES IN ITS RATES AND CHARGES FOR WATER UTILITY SERVICE.

DOCKET NO. W-01812A-22-

DIRECT TESTIONY OF
JAMES EASON
ON BEHALF OF
BERMUDA WATER COMPANY, INC.
SEPTEMBER 30, 2022

## TABLE OF CONTENTS

I. INTRODUCTION AND QUALIFICATIONS ..... 1
II. OPERATIONS ..... 3
III. CAPITAL PROJECTS COMPLETED SINCE THE LAST RATE CASE ..... 12
IV POST TEST YEAR PLANT ..... 17

## I. INTRODUCTION AND OUALIFICATIONS

## Q1. STATE YOUR NAME AND ADDRESS.

A1. My name is James Eason, and I am the Director of State Operations for the Western Region, which includes Bermuda Water Company ("BWC" or the "Company") in Arizona and Great Basin Water Co. ("GBWC") in Nevada. As Director of State Operations, I oversee all operations activity for BWC and GBWC. My business address is 1005 Terminal Way, Suite 294, Reno, Nevada 89502.

## Q2. WHAT IS YOUR PROFESSION AND BACKGROUND?

A2. The title of my position changed from the VP of Operations to Director, State Operations for Arizona in December of 2020. The job description has not changed at this time, only the title. Please see attached Exhibit JE-01 (resume), Director, State Operations (job description).

I am responsible for directing the safe, efficient, and economical operation of the Western Region Facilities. My current duties and responsibilities include the following:

- Foster and ensure a safe work environment for all employees,
- Manage customer relationships with the community,
- Economic performance of operating subsidiaries within the Western Region,
- Lead operations team to ensure compliance with all applicable local, state, and federal regulations,
- Maintain system assets in good operating condition,
- Update and replace any equipment and assets to ensure efficient operations,
- Develop and oversee capital projects to meet customer growth,
- Manage and provide leadership for a staff of approximately 39 employees regionally,
- Provide company and customer-related information to corporate headquarters, and
- Stay abreast of local environmental and utility regulations.

## Q3. WHAT IS YOUR EDUCATIONAL AND PROFESSIONAL BACKGROUND?

A3. My educational and professional background are described in the attached Exhibit JE-02.

Q4. HAVE YOU TESTIFIED PREVIOUSLY BEFORE THE ARIZONA CORPORATION COMMISSION ("COMMISSION")?

A4. Yes. I provided testimony in the last BWC general rate case in Docket W-01812A-200109.

## Q5. HAVE YOU PROVIDED TESTIMONY IN ANY OTHER STATES?

A5. Yes. I have provided testimony in Nevada in the following cases:

1) Docket No. 15-06063, Utilities, Inc. of Central Nevada General Rate Case ("GRC").
2) Docket No. 16-03006, Utilities, Inc. of Nevada 2016 Integrated Resource Plan ("IRP").
3) Docket No. 16-12006, GBWC Spring Creek Meter Reading.
4) Docket No. 16-12037, GBWC Pahrump GRC.
5) Docket No. 17-12022, GBWC Spring Creek GRC.
6) Docket No. 18-03005, GBWC 2018 Consolidated IRP.
7) Docket No. 18-11014, GBWC Cold Springs /Spanish Springs GRC.
8) Docket No. 19-12029, GBWC Pahrump GRC.
9) Docket No. 20-07015, GBWC Cold Springs GRC.
10) Docket No. 20-07017, GBWC Spring Creek GRC.
11) Docket No.21-03003, GBWC 2021 Consolidated IRP.
12) Docket No.21-03042, SIR Well 2 PD.
13) Docket No.21-06009, SIR Dewatering PD and
14) Docket No.21-12025, GBWC Consolidated Rate Case.

## Q6. WHAT IS THE PURPOSE OF YOUR TESTIMONY IN THIS PROCEEDING?

A6. The purpose of my testimony is to provide the Commission with a brief overview of BWC's operations and the Company's continued efforts to provide customers with the best possible water utility service. I will briefly describe projects completed since the last rate case and projects that will be completed shortly. Additionally, I provide support for the Company's application to increase its rates pertaining to the provision of water utility services.

## II. OPERATIONS

## Q7. WOULD YOU BRIEFLY DESCRIBE THE COMPANY'S WATER OPERATIONS?

A7. BWC's water system encompasses the southern portion of Bullhead City, most of Fort Mojave Mesa, and the northern portion of Mohave Valley located along the Colorado River in Mohave County, Arizona. The Company's operations office is centrally located at 4544 Highway 95 in a 4,500 square foot building built in 1991. The building contains the Company's operations office, shop, and work areas.

The BWC system spans an area 10 miles north to south and two to four miles east to west, with the certificated area covering all or a portion of 24 square-mile sections. The southern portion of the service area resembles a "checkerboard" due to land ownership of alternating sections by the Fort Mojave Indian Reservation, the State of Arizona, and the U.S. Department of the Interior, Bureau of Land Management ("BLM").

The system is designed to provide potable water and sufficient water pressure to provide fire protection service to residential and commercial customers in the service area. BWC has developed two distinct pressure zones to take advantage of the geographic elevations to supply water using gravity flows in the distribution system. Pressure-reducing valves are strategically located throughout the system.

BWC wholesales water to the City of Bullhead (Former EPCOR Water Arizona, Inc. water system) in Section 23, T19N, R22W, to Sunrise Vistas Utilities Company in Section 18, T19N, R22W, and the Fort Mojave Tribal Utilities Authority in Section 14, T18N, R22W. BWC also has a tie-in at the Mesquite Creek subdivision on Boundary Cone Road to wholesale water to the Fort Mojave Tribal Utilities Authority.

Groundwater pumped from area wells has been deemed Colorado River water by various regulatory authorities and is currently subject to administrative requirements of the Colorado River Compact and other interstate agreements. Colorado River water is contracted to Bullhead City and the Mohave Valley Irrigation and Drainage District ("MVIDD") by the U.S. Department of the Interior, Bureau of Reclamation. Before developing a subdivision in BWC's service area, developers are required to obtain a sufficient allocation of water from available contract supplies to serve the resulting population of the subdivision. It is currently the policy of MVIDD to allocate water directly to the property being subdivided. BWC then supplies this water to the subdivisions within its service area.

BWC owns 10 wells and nine of those wells are in operation. The operating design for the Company's wells is shown below in Table 1.

TABLE 1: SOURCE OF SUPPLY

| ADWR No. | Depth <br> (feet) | Casing <br> (inches) | Pump <br> Depth <br> (feet) | Pump <br> Motor | Rated Pump <br> Capacity <br> (GPM) | Actual Pumping <br> Capacity <br> (GPM) |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: |
| Well \#1 <br> $55-527191$ | 200 | $20 / 16$ | 168 | 75 HP | 575 | 550 |
| Well \#2 <br> $55-600335$ | 200 | $20 / 16 / 12$ | 188 | 75 HP | 575 | 5250 |
| Well \#3 <br> $55-600336$ | 200 | 20 | 168 | 40 HP | 320 | 275 |
| Well \#4 <br> $55-600337$ | 180 | 8 | 148 | 30 HP | 275 | 270 |
| Well \#6 <br> $55-806426$ | 300 | 20 | 180 | 60 HP | 460 | 350 |
| Well \#7 <br> $55-532342$ | 185 | 12 | 160 | 60 HP | 475 | 475 |
| Well \#8 <br> $55-565030$ | 200 | 12 | 160 | 60 HP | 460 | 450 |
| Well \#9 <br> $55-215355$ | 200 | 16 | 160 | 60 HP | 700 | 700 |
| Well \#10 <br> $55-215356$ | 200 | 14 | 160 | 150 HP | 950 | 950 |

The depth of water for the wells has not varied since the Company has been in business.
Water from all wells is pumped to the Company's main storage tanks. Water from the main storage site is boosted to the highest-pressure zone when needed.

BWC has two active storage sites in its two pressure zones. BWC's storage capacity is more than 2.7 million gallons. Table 2 shows the operational data.:

TABLE 2: STORAGE CAPACITY

| ZONE | SITE | CAPACITY | QUANTITY | ELEVATION |
| :--- | :--- | :--- | :--- | :--- |
| Main Tank 1 | El Rodeo Rd. | 500,000 | 1 | 790 |
| Main Tank 2 | El Rodeo Rd. | 500,000 | 1 | 790 |
| Main Tank 3 | El Rodeo Rd. | 500,000 | 1 | 790 |
| Main Tank 4 | El Rodeo Rd. | 500,000 | 1 | 790 |
| High South Tank | Arroyo Vista | 372,000 | 1 | 940 |
| High North Tank | Arroyo Vista | 372,000 | 1 | 940 |

The main storage reservoirs at the El Rodeo site hold a combined 2,000,000 gallons at an elevation of 790 feet. The site, centrally located on land leased from the State of Arizona, provides gravity flow water with constant pressure to most of the Company's active service area.

The storage reservoirs (Arroyo Vista) in the High Zone are supplied by water from the main storage reservoir that is then lifted at the Arroyo Vista Booster Station. This site is located on land leased from the BLM.

BWC has two booster stations. The Arroyo Vista Booster Station is located on Shadow Canyon Drive in Bullhead City. It has three 60 -horsepower ("hp") pumps, each with a pumping capacity of 500 gpm . It was designed to operate two pumps on a rotating basis, with the third pump as backup. Another booster station is located on Camino Real. It contains two $25-\mathrm{hp}$ pumps and four $10-\mathrm{hp}$ pumps.

BWC has approximately 170 miles of water mains installed. Most main installations have occurred since 1984. The water mains are looped as much as possible to provide an integrated system with few "dead end" lines. Transmission lines are designed so that water is available to all parts of the system in the event of well or storage outages.

## Q8. WITHIN THE COMPANY, WHO IS RESPONSIBLE FOR ENSURING THAT CUSTOMERS ARE RECEIVING THE BEST POSSIBLE SERVICE?

A8. I am responsible for ensuring that customers receive the best possible service. To discharge this responsibility, I make every effort to see that the Company hires and maintains a highly qualified and professional staff. Steven Taylor, based in the Bullhead City office, is the Area Manager with nine staff and is supported by a Project Coordinator, Josh Kemp. Bermuda Water Company is also supported by other team members from the Nevada offices and gets support services from the Chicago office. Together, we continue to make customer satisfaction the primary responsibility of every employee.

## Q9. DOES THE COMPANY HAVE PROGRAMS IN PLACE TO HELP ENSURE THAT CUSTOMERS RECEIVE QUALITY UTILITY SERVICE?

A9. Yes. First and foremost, we ensure that our operations personnel work in safe conditions and duly certified by environmental regulatory authorities. We provide extensive safety and training resources to increase their awareness, knowledge, and education in the water field. Our licensed operators hold levels of water certifications aligning with distribution system requirements. Each certified operator must maintain 30 hours of additional, approved continuing education training every three years, as required by the Arizona Department of Environmental Quality ("ADEQ"). In addition, our operators have attended OSHA training classes for confined spaces and elevated platforms. We also hold weekly staff and monthly safety meetings to address service concerns specifically, and to increase employee sensitivity to customer satisfaction, all while providing a safe working environment. Topics covered include service problems encountered, steps taken to solve these problems, new regulations, and cost control measures. Specific safety issues on operations and at-home safety is chosen for discussion and review. For example, during COVID, our employees were initially updated daily and then weekly on the current situation in their area, where to find resources, how to address customer questions and
concerns, where to find vaccination locations, and where to find personal support when needed. These regular meetings also serve as an opportunity to reinforce the Company's customer service philosophy, and to keep each of us focused on what is important - the customers. Continuing education programs are provided for all employees, including classes routinely conducted by Company staff and outside consultants. BWC's most valuable resource is its employees. By keeping up to date with new methods and changing regulations, the Company enables them to provide better service and hold down costs.

## Q10. DOES BWC HAVE ANY OPERATIONAL PROGRAMS IN PLACE?

A10. To ensure that customers are provided the best possible service, BWC also employs operational programs such as routine testing and periodic water main flushing to improve water quality, a valve exercising program, and a 24 -hour-a-day, seven-day-a-week on-call emergency service. Facilities are continuously monitored or checked daily with our Supervisory Control and Data Acquisition ("SCADA") system.

Q11. HOW DOES BERMUDA WATER CO. COMMUNICATE WITH THEIR CUSTOMERS AND KEY STAKEHOLDERS?

A11. Communication with customers and community leaders regarding issues that may impact the quality or cost of service is also an important aspect of the business. As increased environmental regulation continues to place upward pressure on the cost of providing service, it becomes more critical for BWC to inform customers of the measures it must take to ensure their drinking water is safe. Included in these customer communication efforts would be, among others, attendance at Bullhead City Franchise meetings, customer letters, bill inserts, and back-of-the-bill messages, and the annual Consumer Confidence Reports detailing the Safe Drinking Water Act compliance.

In addition to these efforts, BWC has an established website that provides customers direct access to the Company and relevant information. BWC uses an automatic message delivery system called My Utility, enabling the Company to provide specific information to customers in a particular geographic area or subdivision, advising them of any upgrades or emergency repairs being done that may cause service disruption. We can also notify customers in advance of scheduled repairs, periodic flushing of the water system, or other updates regarding repairs. Updates and improvements to this service are ongoing.

## Q12. HAS BWC COMPLETED THE INSTALLATION OF AMR METERS?

A12. BWC continues changing all its meters to Radio Read or Automatic Meter Reads ("AMR"). With the installation of AMR meters, the operator can go back to the meter to download up to five months of consumption history when requested. In addition, an indepth hourly usage of the consumption history can be pulled for a limited time to see a customer's use in 24-hours. This helps to pinpoint any usage at the request of the customer or the Company's billing department due to a large bill caused by elevated usage.

Q13. DOES BWC HAVE A PREVENTATIVE MAINTENANCE PROGRAM IN PLACE?

A13. A program for the operations and service personnel to document the maintenance and repair of assets and to receive field activities was implemented in August of 2018. The new program is a web-based software program by Lucity, called Operations Maintenance System ("OMS"). The Lucity software program is integrated with or into Geographic Information Software ("GIS') and utilizes GIS to show all assets including, pipe, hydrants, valves, lateral services, meters, booster stations, and wells. The operators and field technicians have been given tablets to receive the field activity request in real-time. They complete the activity, enter it, showing the completion date and time. They can also enter field activities, or work orders for any repairs made in the field, including main leaks,
service line repairs or other tasks such as locates, inspections, valve exercising and other maintenance, collecting Global Positioning System ("GPS") points, etc. Operators can note the condition of any asset and upload pictures associated with the activity. Weekly meetings are held to discuss new updates and any challenges field staff or operations may have with the new OMS software. Our Corporate Support Services department supports this program.

## Q14. HOW DOES THE COMPANY MANAGE ITS CAPITAL IMPROVEMENT PROGRAM?

A14. All large and complex capital projects are reviewed and approved by the Capital Project Review Team ("CPRT"). The CPRT consists of a group of Corix ${ }^{1}$ employees throughout the company, including operations managers, engineers, and financial staff, who review each capital project before approving the construction or purchase of the plant. The team's purpose is to collaborate on areas of expertise and experience to find the best capital project solution for a given situation. The team's broad expertise vets' new methodologies, vendors, and solutions. This process also acts as a gatekeeper to ensure best business practices, such as bidding practices, are followed prior to opening a project. single capital project may go before the CPRT more than once to ensure best practices are followed and the best solution is being implemented. In addition to projects managed through CPRT process, we also manage some upgrades in the water systems. These field-level projects include repairing various pumping equipment, installing additional chemical feed equipment, upgrading the pumping capacity, piping, service lines, electrical controls, maintenance of elevated storage tanks, and painting all the facilities. These programs and upgrades also help ensure that company-wide facilities are adequately maintained and meet safety standards.
${ }^{1}$ Parent company for Bermuda Water Company.

In addition, the Company initially incorporated the 10 -box asset management framework advocated by the U.S. Environmental Protection Agency ("EPA"). According to the EPA, "[a]sset management is maintaining a desired level of service for what you want your assets to provide at the lowest life-cycle cost. The lowest life-cycle cost is the best reasonable cost for rehabilitating, repairing, or replacing an asset. Asset management is a framework being widely adopted to pursue and achieve sustainable infrastructure. It is managing infrastructure capital assets to minimize the total cost of owning and operating them while delivering the desired service levels. Asset management programs with good data, including asset attributes (e.g., age, condition, and criticality), life-cycle costing, proactive operations, and maintenance and capital replacement plans based on cost-benefit analyses, can be the most efficient method of meeting this challenge. ${ }^{\prime 2}$

The asset management framework provided a systematic methodology to incorporate the gathered information used to prioritize past and future capital projects based on level of service requirements, the criticality of assets, and condition assessments of those assets. Corix (BWC's parent company) has continued to develop asset maintenance guidelines to extend the life of current assets and reduce system disruptions. An asset management plan is a dynamic plan evolving with changes in required levels of service, continued information gathering and condition assessments, and the addition of new infrastructure. Additionally, BWC has completed a master plan with a five-year capital action plan and a 20-year forward asset replacement plan. The master plan will provide the capital planning and guidance needed to continue to provide safe and reliable service to our customers.

Some assets are beginning to reach their critical life where upgrades and rehabilitations are necessary to continue to use the assets compliantly. As discussed previously, BWC "has developed asset maintenance guidelines to extend the life of current assets. An asset

[^2]management plan is a dynamic plan evolving with changes in required levels of service and continued information gathering and condition assessments, and inclusion of the addition of new infrastructure." BWC continues to look for ways to improve the reliability and performance of its assets, while maintaining the system's reliability for our customers. The multiple well rehabilitation and tank refurbishment projects listed below in the capital projects section are examples of working within new guidelines established by state and federal agencies and utilizing industries' best practices to update and maintain assets.

## Q15. HAS INCREASED FEDERAL REGULATION OF WATER UTILITIES CONTINUED TO HAVE AN IMPACT ON THE COMPANY?

A15. Yes, absolutely. The EPA's Safe Drinking Water Act ("SDWA") and the Clean Water Act ("CWA") have changed how water utilities conduct their business. ADEQ implements statutes and regulations adopted by the State of Arizona under these federal enactments. Additional costs have been placed upon water and wastewater utilities to comply with more stringent limits in this area. BWC continues to abide by the many requirements contained in the reauthorization of the SDWA and CWA. Still, new requirements remain promulgated, which the Company must address as it operates and maintains its critical assets, such as wells and tanks.

## III. CAPITAL PROJECTS COMPLETED SINCE THE LAST RATE CASE

Q16. HOW MANY CAPITAL PROJECTS WERE COMPLETED BEFORE THE CLOSE OF THE TEST YEAR?

A16. A total of one capital project with four phases was completed, described below.

Q17. PLEASE PROVIDE A BRIEF DESCRIPTION OF THE EL RODEO TANK 1-4 REHABILITATION PROJECT.

A17. The El Rodeo Tanks 1-4 Project was completed as one project with four different phases or rehabilitations. El Rodeo Tanks 1 and 3 were rehabilitated and completed first, followed by El Rodeo Tanks 2 and 4. The phasing of the rehabilitation work was done to ensure three tanks were online and there was always adequate storage in the system during the project. I describe below the work and costs completed at each tank and then provide the total project cost for the work completed on all four El Rodeo Tanks.

Q18. PLEASE PROVIDE A BRIEF DESCRIPTION OF EL RODEO TANKS 1-4 REHABILITATION PROJECT.

A18. During the final rehabilitation and inspections in 2019 of the tanks at the Arroyo Vista Tank Site by third-party contractor Superior Tank Solutions ("STS"), BWC requested the evaluation of the EI Rodeo Tanks 1-4 by STS to confirm the following findings from an inspection completed by Inland Potable on May 13, 2019. The results explained below are not unexpected for tanks of this age and confirmed to BWC that these tanks could be rehabilitated instead of replaced. The rehabilitation approach was the most economical.

- Tank 1: There was corrosion on the rafter ends, lower lips, and connection points, and the rafters were starting to twist. The areas of the floor coating were showing failure and beginning to corrode. The shell was also covered with countless rust/corrosion sites with visible temporary patches based on an inspection performed by divers.
- Tank 2: Similar observations as described above regarding Tank 1, except for rust nodules covering the floor and corrosion around the internal overflow weir.
- Tank 3: Similar observations as described above regarding Tank 1, except for twisting rafters, rust stops along the high-water mark line, and mass blistering and rust nodules on the tank floor.
- Tank 4: Similar observations as described above regarding Tank 1, except for corrosion on the overflow piping (visual repairs identified) and rusting along the rafters and the welds attaching the rafters to the supports or connection points.

These tanks have been in service since the 1990s. Below is a list of the work performed:

## INTERIOR COATING:

- Remove remaining water and deposits from the tank interior
- Pressure washing all interior areas per SSPC-SP1
- Inspection Blast on the floor
- Perform all welding repairs and upgrades under this scope of work
- SSPC-SP 10 "Near White Metal Blast" roof and shell areas
- Atmospheric Areas - Apply ANSI/NSF 61 approved epoxy coating - Product - Sherwin Williams Macropoxy 646 PW
- Apply stripe coat on welds, irregular surfaces, and on heavily corroded rafter edges
- Applied in two coats to an average of 10 mil minimum DFT
- First coat shall be light blue
- Second coat shall be white
- Roof to Shell juncture and connection points will be caulked with NSF 61 Sikaflex 1A
- Immersion Areas - Apply ANSI/NSF 61 approved 100\% Solids Plural Component Epoxy coating
- Product - Sherwin Williams Sherplate PW
- Apply stripe coat on welds in immersion zone
- Applied in One coat to an average of 25 mils min DFT - Coating shall be white
- The interior will be ventilated and allowed to cure per the manufacture's specification.
- Holiday Detection will be performed in the immersion zone.
- All holidays and defects identified will be repaired per the manufacturer's recommendations.
- Tank will be cleaned and rinsed to remove all debris and residual contaminants.
- Perform disinfection of the tank in accordance with AWWA C-652 - Method 2 Disinfection of Water Tanks

## EXTERIOR COATING:

- Pressure wash all exterior areas per SSPC-SP1
- Perform all welding repairs and upgrades under this scope of work
- Perform surface preparation to new steel and areas of coating failure: - Spot prep areas of rusting per SSPC-SP 2 or 3 - Blast per SSPC-SP 6 all new steel
- Spot prime small failure areas with surface tolerant epoxy to a DFT of 3-5 mils
- Apply one full coat of epoxy to all newly installed bare steel:
- Product - Sherwin Williams Macropoxy 646 PW
- Applied in One coat to an average of 3-5 mil minimum DFT
- Apply one full coat of Urethane to all exterior areas:
- Product - Sherwin Williams Sheloxane 800
- Applied in One coat to an average of 3-5 mil minimum DFT

## INCLUDED UPGRADES/ REPAIRS:

- Provide and install new gaskets and hardware on the manways and roof hatch.
- Provide and Install new FRP interior ladder.
- Provide and install a new full travel mechanical liquid level indicator
- Provide and install a new 30 " ADEQ compliant mushroom roof vent with stainless steel fine mesh screen
- Provide and install lateral supports between the roof rafters
- Provide and install a new overflow internal weir box
- Resecure the steel grade band for the foundation
- Remove and plate over the threaded coupling on the roof hatch

Q19. WAS A COMPETITIVE BID PROCESS USED FOR THIS PROJECT?
A19. Yes. RFPs were sent to three qualified contractors: Superior Tank Solutions, Paso Robels Tank, and MMI. Paso Robels and MMI declined to participate, and Superior Tank Solutions was chosen based on experience and qualifications.

Q20. WHAT WERE THE FINAL COSTS OF THE EL RODEO TANKS 1-4 PROJECT? A20. The project costs are described in the following chart:

El Rodeo Tanks 1-4 Rehabilitation - Project 20211232
Dollar Amount
Parts/Construction \$1,109,227
Internal Labor/Capitalized Time \$1,212

Interest During Construction
\$33,584
Project Total $\mathbf{\$ 1 , 1 4 4 , 0 2 3}$

Below is the breakout of Parts/Construction Costs per tank, the breakout does not include Capitalized Time or IDC:

| Tank Number | Parts/Construction Cost |
| :---: | :---: |
| 1 | $\$ 291,094$ |
| 2 | $\$ 320,594$ |
| 3 | $\$ 273,594$ |
| 4 | $\$ 224,644$ |

Q21. PLEASE DESCRIBE ANY ASSETS WHICH WERE RETIRED AS PART OF THIS PROJECT.

A21. The floor, inside ladder, vent, target gauge and equipment, and isolation valve were retired.

## POST TEST YEAR PLANT

## Q22. HOW MANY POST TEST YEAR CAPITAL PROJECTS ARE CURRENTLY IN PROCESS AND WILL BE COMPLETED BY JUNE 2023?

A22. There are a total of five capital projects, which are described below. Many of these projects were to be completed prior to the close of Test Year but were delayed due to supply chain and labor constraints.

## Well 9 Proiect

## Q23. PLEASE PROVIDE A BRIEF DESCRIPTION OF THE WELL 9 REHABILITATION PROJECT.

A23. Well 9 , initially drilled in 2007, had a static water level of 130 feet below ground level ("bgl"), and it was constructed with a nominal 16 -inch casing to 160 feet bgl. From 160 to 200 feet bgl, the casing diameter was reduced to 14 -inch stainless steel ("SS") casing. The Well Driller Report documents the screen interval (wire wrap screen) from 161-200 feet bgl. The well was equipped with a Goulds, Model 8RJLC5 with a 60 HP Franklin Submersible motor, pumping at 450 gallons per minute (gpm). Currently, the physical rehabilitation work on this well began in February 2022 and ended in May 2020 and the well is pumping into the system. Due to supply chain constraints, the parts for the new VFD and ATS for the well have not arrived or been installed, delaying the project's closing. The following work has been completed at Well 9: the removal of the pump and motor assemblies, video surveys, and a thorough cleaning of the screen intervals inside the casing to increase the specific capacity of the well.

Q24. WHAT IS THE ESTIMATED COST OF THE WELL 9 REHAB PROJECT?
A24. The project costs are described in the following chart:

Well 9 Rehabilitation - Project 2020193
Dollar Amount
Total Expected Cost
\$195,400

Q25. WAS A COMPETITIVE BIDDING PROCESS USED FOR THIS PROJECT?
A25. Yes. The invitation to bid was sent to three companies. The selected low bidder is a contractor BWC has used in the past.

Q26. PLEASE DESCRIBE ANY ASSETS WHICH WERE RETIRED AS PART OF THIS PROJECT.

A26. Pump, motor, and column pipe.

Q27. WHEN WILL THE WELL 1 REHAB PROJECT BE COMPLETED?
A27. BWC expects the Well 9 rehab project to be completed by September 2022.

Well 6 Proiect

Q28. PLEASE PROVIDE A BRIEF DESCRIPTION OF THE WELL 6 REHABILITATION PROJECT.

A28. Well-6, initially drilled in 1959, had a static water level of 140 feet below bgl, and it was constructed with a nominal 20 -inch casing to a depth of 300 feet bgl. The screen interval was not provided on the well drill report and is unknown now. Sometime in the well's history, a liner was installed, but no information is available on the liner. No additional information is currently known about this well. Well-6 is scheduled for rehabilitation in
the fall of 2022. This well is 63 years old, and the objective of this work will be to remove the pump assembly, video survey the Well, and thoroughly clean the screen intervals inside the casing to increase the capacity of the well. The scope of work will first require the services of a well pump company to remove the old pumping equipment, conduct a video survey assessment, and then proceed with the rehabilitation of Well 6.

Q29. WHAT IS THE ESTIMATED COST OF THE WELL 6 REHAB PROJECT?
A29. The project costs are described in the following chart:

Well 6 Rehabilitation - Project 2022103
Dollar Amount
Total Expected Cost
$\mathbf{\$ 2 2 0 , 0 0 0}$

Q30. WAS A COMPETITIVE BIDDING PROCESS USED FOR THIS PROJECT?
A30. Yes. The invitation to bid was sent to three companies. The selected low bidder is a contractor BWC has used in the past.

Q31. PLEASE DESCRIBE ANY ASSETS WHICH ARE EXPECTED TO BE RETIRED AS PART OF THIS PROJECT.

A31. Pump, motor, and column pipe.

Q32. WHEN WILL THE WELL 6 REHAB PROJECT BE COMPLETED?
A32. BWC expects the Well 6 rehab project to be completed by December 2022.

## Cathodic Protection Project

Q33. PLEASE PROVIDE A BRIEF DESCRIPTION OF THE CATHODIC PROTECTION PROJECT.

A33. The project involves designing and installing a new passive cathodic protection system known as the Sacrificial Galvanic Anode at the Arroyo Vista Tank site, composed of the North and South tanks. The vendor's designer recommends the passive cathodic protection system for the two tanks based on experience in the area and the previous installation of similar equipment at the El Rodeo Tank site. The equipment is installed inside the tank and consists of sacrificial anodes and monitoring equipment. In addition, as part of this project, all four tanks at the El Rodeo tank site received new sacrificial anodes, which had been broken or degraded since the installation of the passive cathodic system in 2019. BWC implemented the installation of cathodic protection systems to extend the life of the tanks and reduce or slow down the degradation of the tanks due to electrolysis.

Q34. WHAT ARE THE EXPECTED FINAL COSTS OF THE PROJECT?
A34. The project costs are described in the following chart:

Cathodic Protection - Project 2024078
Dollar Amount
Parts/Construction $\$ 55,100$
Internal Labor/Capitalized Time \$0

Interest During Construction \$0

Project Total
$\mathbf{\$ 5 5 , 1 0 0}$

Q35. WAS A COMPETITIVE BID PROCESS USED FOR THIS PROJECT?
A35. Yes. The contractor was chosen based on experience.

Q36. PLEASE DESCRIBE ANY ASSETS WHICH WERE RETIRED AS PART OF THIS PROJECT.

A36. No assets were retired with this project.

Q37. WHEN WILL THE CATHODIC PROTECTION PROJECT BE COMPLETED?
A37. BWC expects the Cathodic Protection project to be completed by November 2022.

## Continued AMR Replacement

Q38. PLEASE PROVIDE A BRIEF DESCRIPTION OF THE AMR REPLACEMENT WORK.

A38. New Automatic Meter Reading meters are being installed with radio read capability as part of BWC's ongoing meter replacement program. Between April 1, 2020, and June 30, 2022, an additional 2,019 AMRs have been installed in the system. As of June 30, 2022, there is a total of 6,372 AMRs in the system, out of a total meter count of 9,711 . No project ID was established to avoid the accrual of IDC.

Q39. WHAT IS THE ESTIMATED COST OF THE AMR PROJECT BEING SOUGHT FOR RECOVERY IN THIS DOCKET?

A39. The project costs are described in the following chart:

| Ongoing AMR Meter Replacement Program |  |
| :---: | :---: |
| Dollar Amount |  |
| Total Expected Cost | $\$ 768,500$ |

Q40. WAS A COMPETITIVE BIDDING PROCESS USED FOR THIS PROJECT?
A40. No. The installation of new meters is being done by BWC field staff.

Q41. PLEASE DESCRIBE ANY ASSETS WHICH WERE RETIRED AS PART OF THIS PROJECT.

A41. The old meters will be retired as part of this project.

Q42. WHEN WILL THE AMR PROJECT BE COMPLETED?
A42. BWC expects the AMR project to be completed by June 2023, considering supply chain constraints and disruptions.

## BWC Generator Project

Q43. PLEASE PROVIDE A BRIEF DESCRIPTION OF THE BWC GENERATOR PROJECT.

A43. The BWC system does not have backup power to meet prolonged power outages due to climate change issues, rolling brown/black outs or routine system disruptions at the following well sites:

## Well Site Locations

- Well 2 - North Intersection La Riqueza and El Rodeo Rd.
- Well 5 - Bullhead City Parkway and Arroyo Vista Dr.
- Well 6-1852 Joy Lane
- Well 7-5759 Wishing Well Dr.
- Well 8-1565 El Rodeo Rd.

During the Failure Mode and Effect Analysis Workshop (conducted in 2017-2018) and the BWC Master Plan (2022) evaluation, BWC identified and reaffirmed that the lack of backup power to the well sites called out above could result in the inability to provide safe and reliable drinking water to BWC customers during a prolonged power outage. In the event of a prolonged power outage, the Arroyo Vista and El Rodeo Tanks and System

Pressure Zones would be limited to only a constant 24 -hour supply of water. The backup generators ensure water production can continue from the wells to all the tanks and pressure zones during an extended power outage. Work to be completed at the site includes design for the five well sites, the Boundary Topo Survey, Civil Engineering, Electrical Design, Permitting and Plan approvals through Mohave Co. Planning Department and Bullhead City Building Department, Preparing Construction Bid Documents, construction oversight services during construction, engineering as-builts and final acceptance by Mohave Co. Planning Department, Bullhead City Building Department, and Final Close-out Report. The Close-out Report will consist of documentation of the complete project, dates of all submittals to governing agencies, dates of approvals, the timeline from start to finish, construction notes, generator setting, and start-up dates. The generators and the transfer switching equipment have been ordered and will be provided by BWC. Select Generator Company will perform Start-up and Bank Testing.

Q44. WHAT ARE THE EXPECTED FINAL COSTS OF THE BWC GENERATOR PROJECT?

A44. The project costs are described in the following chart:

Bermuda Generator - Project 2021157

## Dollar Amount

| Project Total | $\mathbf{\$ 5 9 0 , 0 0 0}$ |
| :--- | :---: |

Q45. WAS A COMPETITIVE BID PROCESS USED FOR THIS PROJECT?
A45. Yes. RFPs were sent to three qualified engineering firms (one response) and three vendors (three responses). A bid has not yet been awarded but the decision will be based on cost, experience, and qualifications.

Q46. PLEASE DESCRIBE ANY ASSETS WHICH WILL BE RETIRED AS PART OF THIS PROJECT.

A46. No assets will be retired.

Q47. WHEN WILL THE GENERATOR PROJECT BE COMPLETED?
A47. BWC expects the Generator project to be completed by June 2023, due to supply chain constraints and disruptions.

Master Plan Project

Q48. PLEASE PROVIDE A BRIEF DESCRIPTION OF BWC'S MASTER PLAN PROJECT.

A48. The main objective of this project was to review the condition of all existing assets placed into service, determine the remaining life of the assets, and develop a plan and estimate of new assets needed to support current and future customers in our service territory. This 20year plan will enable BWC to have sufficient pump and storage capacity to serve our customers now and into the future. In addition, we will update all assets in GIS on an electronic map with a GPS location for each asset. This includes wells, booster stations, tanks, transmission lines, distribution lines, service lines, meters, fire hydrants, and valves. Importantly, these maps will be readily accessible on all service worker tablets, and they can be accessed in the field to pinpoint GIS locations and used for line locates and to change an asset. This greatly increases the efficiency of employees in the field, and thus allows them to address problems faster and provide a better service.

Q49. WHAT ARE THE FINAL EXPECTED COSTS OF THE MASTER PLAN PROJECT AND ARE THESE COSTS INCLUDED IN THIS APPLICATION?

A49. The project is estimated to cost $\$ 250,000$ but is not yet completed. Itis expected to be completed in Q4 of 2022, and these costs will be included in our next filing.

Q50. WAS A COMPETITIVE BID PROCESS USED FOR THE MASTER PLAN PROJECT?

A50. Yes. RFPs were sent to three qualified engineering firms. Two bids were received, and BWC went with the bidder that had the most experience with system planning and was the lowest bidder.

Q51. DOES THIS CONCLUDE YOUR DIRECT TESTIMONY?
A51. Yes, however, I reserve the right to supplement or make corrections to this testimony at the time of the hearing in this proceeding.

## ExHIBIT JE-01

## Director, State Operations

| Location: | Operations; Multiple |
| :--- | :--- |
| Reports to (title): | President |
| FLSA Classification (US): | Exempt |

About the Job: Provide an overview of why the job exists; a brief description of the general nature of the position (does this position supervise reports? What is the scope of the position?), and what the job is to accomplish.

Responsible for directing the safe and efficient operations of all Corix subsidiaries in assigned Business Unit(s) (BU). Oversees all areas of water, and wastewater operations and/or energy operations. Provides oversight, guidance, and leadership to the BU operations staff.

## Major Accountabilities: What is this position held accountable for achieving? What are the expectations of this position?

1 Leads and Provides direction to the BU's operations staff in the performance of their duties, establishes
2 Responsible for the effective and efficient utilization of resources with an emphasis on safety, cost control, operational excellence reliability and regulatory compliance with regulations.
3 Leads operations team to be in compliance with all applicable local, state/provincial and federal regulations.
4 Assists in developing and executing the approved Operations operating budget which includes O\&M, administrative and capital expenditures as well as the Capital improvement budget

General Responsibilities: List the primary essential job duties and responsibillies in order of importance, starting with the most important.

- Responsible for the system asset management plan.
- Works cooperatively with the Customer Experience Team to analyze and ensure follow-up to all customer service issues.
- Develops and inspires a strong commitment to employee safety, recognition, and business development.
- Responsible for training, succession planning and the development of leadership within the Operations staff to ensure the operations area is prepared for future growth.
- Recruits, retains, manages, and provides leadership for operations staff.
- Drives EBITDA by effectively challenging and motivating employees to focus on efficient execution of day to day operations and continuous improvement concepts.
- Independent travel between worksites as required.
- Develops and maintains positive relationships with community.
- Remains up to date on new and revised regulations that may impact the company.
- Oversees the maintenance of facilities, company vehicles, tools and equipment as outlined by industry standards to ensure they are in good operating condition.
- Supports regulatory rate filings, through testimony generation; serves as a witness in rate cases.
- Aids in business development opportunities.
- Develops familiarity with other regulated industries
- Performs other duties as required.

Knowledge/Skills/Abilities: the specific attributes someone must possess or have demonstrated proficiency in to successfully perform the position.

- Ability to effectively supervise skilled and unskilled employees, including ability to mentor, evaluate and guide staff to increase skill level, morale, and efficiency.
- Ability to objectively coach employees and managers through complex, difficult and emotional issues.
- Ability to manage budget effectively; ability to interpret financial results and adjust plans to stay on target.
- Ability to define specific problems and offer variable solutions.
- Ability to implement recommendations to effectively resolve problems or issues by using judgment that is consistent with standards, practices, policies, procedures, regulation or government law.
- Ability to specify goals and effectively achieve them.
- Ability to establish and maintain effective working relationships with the general public, co-workers, regulatory agencies and their personnel.
- Ability to keep accurate records and prepare and submit accurate reports.
- Ability to provide for safe working conditions for fellow workers.
- Must have ability to effectively communicate with other employees and the public.
- Ability to understand and implement a variety of the field's concepts, practices and procedures.
- Ability to motivate others in the pursuit of Company goals.
- Excellent analytical, communication and organizational skills.
- Ability to read and comprehend maps, plans and surveys.

## Education / Experience: the qualifications that are necessary for someone to be considered for the position

- Required: Bachelor's degree or a combination or related experience and education.
- Preferred: MBA
- Required: Valid driver's license
- Preferred: Evidence of having obtained certification in plant or system operations in one or more states.
- Minimum 9 years' experience with water and/or wastewater and/or Energy operations utility management with increasing levels of responsibility. Knowledge of all local, state and federal tariffs, regulations and laws pertaining to the assigned Business Unit.
- Required: MS Word, Excel, PowerPoint, Outlook and Explorer

## Working Conditions:

- Light to moderate physical activity, requires normal hearing and vision.
- Equipment Used: Cellphone, PC and/or laptop, copy/fax/scan machine, telephone and other general office equipment. Operates a Company issued motor vehicle.
- Frequent travel may be required.

## Last Edit by:

## EXHIBIT JE-02

## Career Profile

Established and proven results-oriented senior level leader of business operations and affairs with over 15 years of management experience in municipal government, public utilities, and the private utilities industries with business and political acumen and is able to build trust, confidence, creditability and respect. Demonstrative responsibilities include team building, providing short and long-term strategic planning and execution of company vision; budget and overall company financial health management, and the allocation and implementation of resources, resulting in the success of multi-million dollar projects from initial concept to completion by being creative and innovative; developing and cultivating relationships in both the government and private sectors. Strengths and expertise includes visionary and strategic leadership with critical, scientific and technical decisionmaking skills, initiative, flexibility, strong ethics, excellent communication skills, dedication and determination, with a strong public presence and professional image.

## Professional Experience

## Director, State Operations, Great Basin Water Co. and Bermuda Water Co., Reno, Nevada <br> Vice President of Operations, Great Basin Water Co. and Bermuda Water Co., Reno, Nevada

2021 - Present
> Create and maintain a high performing organizational culture aligned with the company values while making challenging, technical and scientific decisions.
> Manages and directs the day-to-day operations and responsibilities of key resources, conducting regular employee performance evaluations and monitoring resources in line with operational needs and workforce demands with an emphasis safety, cost control and regulatory compliance a well as development of leadership necessary for future growth and succession planning.
> Works supportively, collaboratively, efficiently, and effectively with internal business partners and advisors in overseeing all strategic objectives and initiatives especially the preparation and execution of all rate cases, pass-through and indexing activities, changes to service and other PUCN related activities.
> Provides management oversight and recommend actions to ensure development, compliance and execution of developer agreements, payment of fees are in alignment with local, state and federal guidelines, rules, policy and procedures as well as providing guidance over legal issues.
> Actively participates with internal business partners to plan, identify and manage strategic relationships who have an interest in preserving, protecting, conserving, recharging, and preventing waste of ground water resources while executing all business initiatives, potential acquisitions and divestures.
> Develop, review and monitor budgets and financial planning to ensure financial operations and program effectiveness in accordance with overall companies fiscal policies.
> Act as a liaison, facilitate or and mediator between water users and key stakeholder groups, including residents, government agencies, business owners, environmental groups and major industry companies.
> Actively monitors and provides local and regional information related to proposed legislation, regulatory changes, studies, and reports, advising the company of potential impacts to the company and relevant responses involving groundwater resources and related topics.

## Town Manager, Town of Tonopah, Tonopah, NV

2005-2015
> Developed, presented and implemented the strategic plan and vision for the Town of Tonopah, Tonopah Public Utilities, and the Tonopah Library District, with the Tonopah Town Board and staff, which included the responsibility for budgeting, departmental coordination, economic development, and long-term community sustainability while managing the town administrative departments and employees.
> Drove and executed economic development with businesses; promoted community development; and acted as the liaison between the town and various federal, state, and county agencies; administered, managed, and developed new and existing town infrastructure and facilities.
> Acted as a liaison between the community, town staff, and town board members, conducted assessments, procurement, administration; and management of federal, state, and county grants; set deadlines; monitored projects; prepared reports, delineated resources, supervised and organized multi-competing projects.
$>$ As Town Manager, turned around the Town of Tonopah's beginning-ending fund balance increasing from $\$ 130,000$ to $\$ 1.5$ million; the Tonopah Public Utilities (TPU) beginning-ending fund balance increasing from a negative $\$ 170,000$ to a positive of $\$ 400,000$ and the Tonopah Public Library District had been saved from going into receivership by the Nevada Department of Taxation and continues to operate with a positive beginning-ending fund balance today. The Town of Tonopah was also able to create a community endowment fund to help reduce future operational and maintenance costs while providing scholarships for furthering the education of their citizens.
> Managed and directed the coordination and development of government projects, town swimming pool, volunteer firehouse, convention center, community water and sewer infrastructure, and job creation in the private sectors of retained, lodging, mining, and renewable energy. Extensive experience working with federal and state agencies and funding programs, including USDA, GDBG, EPA (Brownfield), and BLM.

## Outside Plant Design Engineer and Project Manager, Southwestern Bell Corporation (SBC), Reno, NV 1997-2005

> Responsible for the detailed economic design and implementation of outside plant facilities in Northern Nevada wire centers. Specializing in commercial, residential and transmission projects; coordinating with large land developers, government agencies, elected officials, small business owners and residential customers regarding telephone facilities. This included organizing, administrating supervising meetings and negotiations involving placement, removal, rearrangement and new construction. This was accomplished through the development of relationships with developers, government officials, local government and residential customers which addressed issues that affected both the customer and SBC.
> Member of a fast paced, self-directed and results oriented team dedicated to providing customer service to both internal and external customers with the implementation of the 1996 TELCO Act for Nevada Bell, which involved disassembling various parts of the network to be leased to competitive local exchange carriers (CLEC) along with the metrics to track CLEC usage and established regulatory guidelines in Nevada.

## Education

> University of Nevada, (UNR), Reno - Bachelor of Science, Business Logistics with a Political Science minor, 1995

## Skills, Professional Groups and Achievements

- Experienced professional in leadership and management of municipal government and utilities with knowledge of financial analytics, systems management, government affairs and long-range planning to meet current and future growth, modernization and redevelopment of infrastructure.
> Appointed Board Member of the University of Nevada Alumni Council, Past Member 2006-2012
Nevada Insurance Pool/Pac, Past Board Member 2006-2015
$>$ Appointed Board Member of the Nye County Water District, Past Member 2009-2015
$>$ Member of Nye County's Renewable Energy Team, Past Member 2009-2015
$>$ Tonopah Historic Mining Park Foundation Executive Board, Past Member 2011-2017
> U.S. Forest Service Rural Schools, Past Board Member
2011-2015
> Achieved the Nevada Rural Water Association - "2012 Manager of the Year" for Tonopah Public Utilities

Bermuda Water Company, Inc.
Docket W-01812A-22-

## I. INTRODUCTION AND OUALIFICATIONS

## Q1. STATE YOUR NAME, PROFESSION AND ADDRESS.

A1. My name is Jared Deason. I am the Regulatory Manager for Sunshine Water Services. My business address is 200 Weathersfield Ave., Altamonte Springs, FL 32714.

Q2. STATE BRIEFLY YOUR EDUCATIONAL BACKGROUND AND EXPERIENCE.
A2. I have a Bachelors Degree in Applied Economics from Florida State University. I have approximately 12 years of experience in the utility industry, the last seven years of which have been with Sunshine Water Services (SWS), a sister company of Bermuda Water Company. I joined SWS in June 2015 as a Financial Analyst assigned to the Florida region. I am currently the Regulatory Manager for the SWS. I was previously employed by the Florida Public Service Commission in the years 2007 to 2011 as a Regulatory Analyst IV assigned to the water and wastewater section of the former Division of Economic Regulation. In that role, I was the lead analyst in many water and wastewater rate proceedings. Additionally, I am a current member of the Society of Utility and Regulatory Financial Analysts and a Certified Rate of Return Analyst (CRRA).

## Q3. PLEASE LIST THE DOCKETS WHERE YOU HAVE PROVIDED TESTIMONY.

A3. I have previously provided testimony in 3 different states; this is my first time providing testimony in Arizona.

- Alabama (ROE Expert) - Docket No. 32553
- Tennessee (ROE Expert) - Docket No. 19-00028
- Florida - Docket Nos. 20150102-SU, 150269-WS, 20160101-WS, 20170223-SU, 20180025-WS, 20190189-WS, 20200139-WS, 20200189-WS, 20210116-WS, 20210119-SU

Q4. ON WHOSE BEHALF ARE YOU PRESENTING THIS TESTIMONY?
A4. I am presenting this testimony and appearing on behalf of Bermuda Water Company (BWC), the applicant for a rate increase in the present docket.

## II. PURPOSE OF TESTIMONY

## Q5. WHAT IS THE PURPOSE OF YOUR DIRECT TESTIMONY?

A5. The purpose is to provide testimony on behalf of BWC related to the cost of common equity that would allow BWC the opportunity to earn a fair return on its prudently invested capital.

## III. SUMMARY

## Q6. PLEASE PROVIDE A SUMMARY OF YOUR RECOMMENDED COST OF COMMON EQUITY.

A6. The recommended common equity cost rate of $10.95 \%$ is summarized in Exhibit JD-1. Because BWC, including its parent company, is not publicly traded, a market-based common equity cost rate cannot be precisely observed. Accordingly, a proxy group of companies was assessed to determine a recommended common equity cost rate applicable to BWC. Utilizing a proxy group of companies with relatively similar risks is consistent with the principle of a fair rate of return established in the Hopel and Bluefield2 cases, adding dependability to the expert judgment required to arrive at a recommended common equity cost rate.
${ }^{1}$ Federal Power Commission v. Hope Natural Gas Co., 320 U.S. 591 (1944).
${ }^{2}$ Bluefield Water Works Improvement Co. v. Public Serv. Comm'n, 262 U.S. 679 (1922).

Nevertheless, no proxy represents all the same risks as any single company. Consequently, an assessment of relative risk between BWC and a proxy group of publicly traded water utilities ("Proxy Group") must be made to determine whether any adjustment(s) to the Proxy Group's indicated common equity cost rate is necessary. This assessment of relative risk is discussed in further detail later in this testimony.

To establish a recommended common equity cost rate, two well- recognized costs of common equity models (i.e., the Discounted Cash Flow ("DCF") and the Capital Asset Pricing Model ("CAPM")) were applied to the market data of the Proxy Group whose selection will be discussed below.

The results derived from each are summarized in Exhibit JD-2 and summarized in the table below.

## Summary of Common Equity Cost Rate

| Single-Stage DCF Model | $7.28 \%$ |
| :--- | ---: |
| CAPM | $10.72 \%$ |
| Comparable Earnings | $10.26 \%$ |
| Market to Book Capitalization Ratio | $8.91 \%$ |
| AVERAGE | $\mathbf{9 . 2 9 \%}$ |
|  | $0.49 \%$ |
| Plus Bond Yield Differenital | $0.50 \%$ |
| Plus Private Placement Premium | $0.67 \%$ |
| Plus Small-Utility Risk Premium | $\mathbf{1 0 . 9 5 \%}$ |

After reviewing the DCF, CAPM, Comparable Earnings and M/B cost rates, I conclude that a common equity cost rate of $9.29 \%$, based upon the average cost rate results, is appropriate before any adjustment for the greater business risks due to its smaller size relative to the Proxy Group as discussed in more detail below. Therefore, the indicated $9.29 \%$ common equity cost rate based solely upon the Proxy Group must be adjusted upward $1.66 \%$ to reflect BWC's increased relative business risk. The details of these
adjustments will be discussed below. After adjustments, the indicated credit and business risk-adjusted common equity cost rate is $10.95 \%$, which is the recommended equity cost rate that is fair, just, reasonable, and conservative.

## IV. GENERAL PRINCIPLES

## Q7. WHAT GENERAL PRINCIPLES HAVE YOU CONSIDERED IN ARRIVING AT

 YOUR RECOMMENDED COMMON EQUITY COST RATE OF 10.95 PERCENT?A7. The cost of capital for a utility can be defined as the return investors require to finance the assets that provide service to customers. From the company's perspective, the required return, which can be provided by debt or equity investors (usually both), has a cost. Individually, the cost of debt (i.e., bonds, debentures, bank loans) and the cost of equity (i.e., common stock and preferred stock) are collectively referred to as the "cost of capital." The cost of capital is based upon the economic principle of "opportunity cost," which means investing in any asset or security implies a forgone opportunity to invest in alternative assets or securities. Because investments with equivalent risks should offer equivalent returns, the opportunity cost of investment should equate to the return available on investments of similar risks.

Although both debt and equity have required costs, they are fundamentally different. The cost of debt is contractually defined and can be directly observed in the market as interest or as a yield on debt securities. Conversely, the cost of equity has no contractual obligation, and neither can it be directly observed in the market as debt can. Because common equity investors claim on a company's cash flows occur only after debt holders are compensated, the risk (or uncertainty) associated with those residual cash flows determines the cost of equity.

Because of this "residual risk," common equity investors require higher returns than debt holders. Thus, equity and debt investors are distinct in that they invest in different securities; face different risks, and require different returns.

According to the basic principles of risk and return, the returns required by investors on any given investment are a function of the investor perceived risk as reflected in the market prices paid by investors. The higher the risk that investors perceive, the higher the return the investor will require.

The returns investors require are also forward-looking, as the return the investor expects to receive in the future for investing capital today is based upon expected economic and capital market conditions. For unregulated that are not price regulated, competition in the marketplace determines the prices of products or services. However, for regulated utilities, regulation must act as a surrogate for competition. An adequate level of earnings is needed to assure that the utility can:

1) Fulfill its obligation to provide safe and reliable water and sewer service.
2) Uphold the integrity of presently invested capital through future reinvestment.
3) Attract new capital at a sensible cost and on sensible terms in competition with other companies of equivalent risk.

These above principles are consistent with the previously noted fair rate of return standards established by the U.S. Supreme Court in the Hope and Bluefield cases.

For rate base regulated utilities, the authorized return on common equity also means the investor-required return. Also, the investor-required return can be defined as the return required by the investor on the funds invested in companies' publicly traded common stocks. As stated above, the cost of common equity is not directly observable in the marketplace since a company has no contractual basis to provide a return to its common shareholders, unlike the contractual interest that is due on debt obligations.

As such, the cost of equity must be projected from economic and financial market data by utilizing financial models developed for that purpose, including the DCF and CAPM
models. Thus, the recommended equity cost rate is based upon the marketplace data of a proxy group of utilities that have similar risks as BWC based upon selection criteria. Because financial models produce a range of results from which the required return can be estimated, that estimation must be based upon a wide-ranging review of applicable data, utilizing both qualitative and quantitative information, and not essentially left to a stringent mathematical estimation. The main issue in estimating the equity cost rate is to make sure that the overall analysis realistically mirrors investors' expectations considering capital markets in general and the relative investment risk of the subject firm related to the proxy group.

Because empirical financial models for estimating the cost of equity are subject to limiting assumptions, most finance literature advises using more than one approach to assess the appropriate cost of equity. No single model is more dependable than all others under all market conditions.

The use of the market data of a proxy group of similar risks, including the use of multiple equity cost rate models, improves the reliability to the informed expert judgment used in estimating the equity cost rate. Therefore, using multiple methods to diminish the effects of limiting assumptions and inputs associated with any single approach is sensible and proper. As such, the results of two well-known and most often used market models, the DCF and CAPM, were used to attain the recommended equity cost rate for BWC.

## V. INVESTMENT RISKS

Q8. DEFINE THE RISKS THAT BWC FACES AND EXPLAIN WHY IT IS IMPORTANT TO THE DETERMINATION OF A FAIR RATE OF RETURN.

A8. The investor-required return on equity reflects investors' assessment of the total investment risk of the subject company. Total investment risk is often viewed in the context of business
and financial risk.
Business risk is associated with the uncertainty of owning a firm's common stock without the firm's use of debt financing. One way to consider the difference between business and financial risk is to view business risk as the uncertainty in the expected earned return on equity, assuming the firm has no outstanding debt.

Some examples of business risks faced by utilities include, but are not limited to, the regulatory environment, mandatory environmental compliance obligations, customer mix, the concentration of customers, economic growth of the service territory, market demand, uncertainties associated with water supplies, operations, capital intensity, the amount of operating leverage, all of which have a direct bearing on earnings.

Although analysts at rating agencies may consider business risks according to individual categories, business risks are interrelated and are not entirely distinct from one another. Thus, it isn't easy to precisely and numerically quantify the effect of any individual factor on investors' required return on equity. For estimating an appropriate return on equity, the pertinent issue is where investors see the subject firm as falling within a range of risks. As investors view a firm as being exposed to additional risks, the investors' required return will also increase, and vice versa.

For regulated utilities, business risks are both long- and short-term. Near-term business risks are shown in the year-to-year variability in earnings and cash flow brought about by economic or regulatory factors. Long-term business risks point toward the prospect of a decreased ability of investors to earn a return on their invested capital. Because utilities accept the obligation to provide safe, adequate, and reliable service all the time, they may not have the option to delay or defer necessary capital investments. Because those investments are capital-intensive, utilities also may not have the option to avoid raising needed external funds during periods of capital market distress.

## Q9. WHAT RISKS ARE SPECIFIC TO THE WATER INDUSTRY?

A9. Water is necessary for sustaining life, and it is the only utility product that is intended for customers to ingest. Accordingly, water quality of the utmost importance to the public health and the welfare of customers. Therefore, water production/distribution is subject to additional and ever-increasing rigid health and safety rules and regulations.

In addition to the health and safety concerns, customers also have substantial concerns regarding the water delivered to them, such as taste and smell. Taste and smell are often the results of naturally occurring elements in water sources such as sulfur, iron, and calcium and are not due to water infrastructure neglect or improper maintenance. Regulators are paying ever closer attention to these concerns because of the strong reactions they stir up in customers.

Water utilities serve several functions, including production, treatment, and delivery. Water utilities obtain their water supply from wells, aquifers, and surface water sources such as reservoirs. Over the years, well supplies and aquifers have been threatened, which has led to minor purification treatment changing to major well rehabilitation, extensive treatment, and/or replacement.

At the same time, Safe Drinking Water Act's (SDWA) quality standards have strengthened considerably, requiring multiple types of treatment before water delivery.

Water supplies can often be limited by drought, overuse, runoff, habitat protection, and other operational, political, and environmental factors. Progressively more rigorous environmental rules and regulations often require additional capital investment in water treatment, thereby intensifying the pressure on water utilities' cash flows through increased capital expenditures for infrastructure, repair, and replacement. Additionally, the U.S. Environmental Protection Agency (EPA) and state and local environmental agencies continue to monitor potential contaminants in the water supply and enact or expand regulations when they feel it is necessary.

Water utilities are usually engaged in the entire process of acquiring supply, producing, treating, and distributing water, serving both a production function and a delivery function. Water utilities require significant capital investment, not only in transmission and distribution systems but also in sources of supply, production, and storage. Continued capital investment is necessary to serve additional customers and replace aging infrastructure, creating a significant risk factor for the entire water utility industry.

## Q10. EXPLAIN THE CAPITAL INTENSITY OF THE WATER UTILITY INDUSTRY COMPARED TO THE OTHER UTILITY INDUSTRIES.

A10. As a capital-intensive industry, water utilities require significantly greater capital investments in the infrastructure required to produce a dollar of revenue than other industries, such as electric utilities. As financing needs continue to increase, the competition for capital from traditional sources has also increased, making the need to maintain financial integrity and attract needed new capital more and more critical.

## Q11. HOW DO WATER UTILITIES RAISE CAPITAL?

A11. The water utility industry requires a high degree of capital intensity and the need for sizeable infrastructure capital spending, which necessitates regulatory support for sufficient and well-timed rate relief. This includes an adequate rate of return on investment by the regulatory bodies.

Considerable water utility investment requires substantial financing. The funds typically used for financing are debt, equity, and cash flow from utility operations. All of these are linked to the opportunity to earn an adequate rate of return on investment.

Consistent with Hope and Bluefield cases, a utility's return must be adequate to maintain credit quality and enable it to attract new capital at reasonable terms. If it cannot raise new capital, the utility must rely upon either retained earnings or free cash flow, which are directly linked to earning a sufficient rate of return. The amount of cash flows represents
the utility's ability to meet its debt and equity obligations. If retained earnings or cash flows are inadequate, it will be extremely difficult for the water utility to attract new capital, at a sensible cost and on sensible terms, to invest in necessary infrastructure replacements and/or upgrades. An inadequate rate of return could be financially destructive for water utilities, given their requirement to provide safe, adequate, and reliable water service to their customers.

## Q12. EXPLAIN HOW THE DEPRECIATION RATES FOR WATER UTILITIES DIFFER FROM OTHER UTILITIES.

A12. In addition to its capital-intensive nature, water utilities experience lower relative depreciation rates. Depreciation is one of the principal sources of internal cash flows for all utilities. Therefore, lower depreciation rates mean that water utility depreciation is a lower source of internally generated cash. This is because water utility assets have longer lives and, therefore, more extended capital recovery periods than other types of utilities. Also, water utilities face greater risk because of inflation, resulting in a greater replacement cost per dollar of net plant than other types of utilities. Water utilities typically experience an average depreciation rate of approximately $2.3 \%$. In contrast, electric utilities experience an average depreciation rate of roughly $3.7 \%$. Low depreciation rates indicate that the pressure on cash flows remains significantly higher for water utilities than other types of utilities.

## Q13. EXPLAIN WHY SIZE HAS A BEARING ON RISK.

A13. Smaller companies are less capable of handling significant events, affecting sales, revenues, and earnings.

For example, if a company were to lose revenues from a few larger customers, it would have a more significant effect on a small company than on a large company with a more extensive customer base. Another issue contributing to the risk effects of size is that
investors demand higher returns to compensate for lack of marketability and liquidity. Because BWC is the regulated utility whose rate base to which the Commission's ultimately allowed overall rate of return will be applied, the relevant risk reflected in the cost of capital must be that of BWC, including the impact of its small size on common equity cost rate. Size is an essential factor, and BWC is significantly smaller than the average utility in the proxy group based upon market capitalization, as will be further discussed in detail below.

Q14. EXPLAIN WHY FINANCIAL RISKS CONSIDERATIONS ARE IMPORTANT TO THE DETERMINATION OF A FAIR RATE OF RETURN.

A14. Financial risk is created by introducing of debt and/or common stock into the company's capital structure, common stock in BWC's case. The additional risk is that a company may not have sufficient cash flows to meet its financial obligations. The higher the proportion of preferred stock in the capital structure, the higher the financial risk, which must be calculated into the common equity cost rate. In other words, investors demand a higher common equity return as compensation for bearing higher investment risk.

Q15. CAN THE RISKS BWC HAS BE PROXIED BY CREDIT AND BOND RATINGS?
A15. Yes, similar bond/issuer credit ratings represent similar combined business and financial risks. Although specific business or financial risks may differ between companies, the same bond/credit rating indicates that the combined risks are similar but not necessarily equal.
It must be kept in mind that a long-term issuer's credit rating is an opinion regarding the company's overall financial capacity to pay its financial obligations as they become due and payable. However, it is not a determination of the risks equity investors face. The claims of equity holders are subordinate to the claims of debt holders. For this reason, the risks of owning common equity do not directly correspond to the risks of owning bonds.

## VI. THE PROXY GROUP AND BWC

Q16. EXPLAIN HOW THE WATER PROXY GROUP WAS CHOSEN.
A16. The proxy group is a selection of water utilities that derive at least 50 percent of their revenue from regulated rates. These utilities have market power and are influenced significantly by economic regulation.

The chosen proxy group comprises six water utilities that derive at least 50 percent of their total revenue from regulated operations. Additionally, the proxy group companies have a median Value Line rating of " $\mathrm{B}++$ ".

To apply the DCF and CAPM, it is necessary to use widely and readily available market data. Therefore, the Proxy Group by selecting those publicly traded utilities that met the following criteria:

1) They are included in the Water Utility Group of Value Line's Standard Edition.
2) They have $50 \%$ or greater of total operating income derived from, and $50 \%$ or greater of 2021 total assets devoted to, regulated operations.
3) They have not cut or omitted their common dividends during the past five years.
4) They have Value Line adjusted betas.
5) They have a positive Value Line five-year dividend per share (DPS) growth rate projection.
6) They have Value Line five-year earnings per share (EPS) growth rate projections.

The following twelve companies meet these criteria:

- American States Water Co.;
- American Water Works Co. Inc.;
- Essential Utilities, Inc.;
- California Water Service;
- Middlesex Water Co.; and
- SJW Group.

Q17. HAVE YOU REVIEWED THE FINANCIAL DATA FOR THE PROXY GROUP?
A17. Yes. Exhibit JD-2 contains the Proxy Group's comparative capitalization and financial statistics for the years from their most recent $10-\mathrm{K}$ filing with the Securities and Exchange Commission. The average Value Line Financial Strength was "B++". The average percentage of revenue derived from regulated water operations was $78.91 \%$. The average market capitalization in millions was 15,753 .

## VII. COMMON EOUITY COST RATE MODELS

Q18. ARE THE COST OF COMMON EQUITY MODELS USED MARKET-BASED?
A18. Yes. The DCF model is market-based in that market prices are utilized in developing the dividend yield component of the model. The CAPM model reflects the market's assessment of bond/credit risk. In addition, the use of beta in the CAPM to determine the equity market premium also demonstrates the market's assessment of market/systematic risk, as betas are derived from regression analyses of market prices.

## VIII. DISCOUNTED CASH FLOW MODEL (DCF)

## Q19. EXPLAIN THE THEORETIC BASIS OF THE DCF MODEL.

A19. The DCF is one of the oldest and most commonly used models for estimating the cost of the common equity for utilities. The DCF is based on the "dividend discount model" of financial theory, which affirms that the value or price of any security is the discounted present value of all future cash flows. There are two fundamental principles of the DCF. First, investors value an asset on the basis of the future cash flows. Second, future dollars are valued less than present dollars because of inflation on dollars.

Q20. WHICH VERSION OF THE DCF MODEL IS UTILIZED?
A20. The single-stage constant growth DCF model is utilized. The single-stage DCF model is expressed as:
$\mathrm{K}=(\mathrm{D} 1 / \mathrm{P} 0)+\mathrm{g}$
Where: $K=$ Cost of Equity Capital
D1 $=$ Expected Dividend Per Share in one year
P0 $=$ Current Market Price (including an adjustment for Flotation Costs)
$\mathrm{g}=$ Expected Dividend Per Share Growth

Q21. DESCRIBE THE DIVIDEND YIELD USED IN THE APPLICATION OF THE DCF.

A21. The dividend yield is the average expected dividend yield as determined by the most recent Value Line Ratings \& Reports for each company in the Proxy Group.

## Q22. WHAT ARE FLOTATION COSTS AND HOW IS THE FLOTATION COST

 ADJUSTMENT INCLUDED WITH THE CURRENT MARKET PRICE IN THE APPLICATION OF THE DCF MODEL?A22. Flotation cost is a generic term used to encompass various costs associated with the issuance of new common shares of stock. These various issuance costs include issuance or underwriting costs, market pressure (the tendency for a company's stock price to decline when new shares are sold), and market break (the periodic declines in capital markets, or "breaks", in which it is more difficult to sell any new stock issues). Several studies have indicated that the average flotation costs associated with issuing of new common shares for utilities are approximately four percent.
The four percent flotation cost adjustment was applied in the conventional manner by simply multiplying the proxy group's average current market price of stock by 0.96 (1-4 percent flotation costs adjustment).

Q23. DESCRIBE THE BASIS OF THE GROWTH RATES OF THE PROXY GROUP IN THE APPLICATION OF THE DCF MODEL.

A23. The most recent Value Line Ratings \& Reports for each company in the proxy group was utilized for the Growth Rates of the proxy group. The Value Line Ratings \& Reports contain projected growth rates in dividends for up to four years.

Investors with limited resources are more likely to rely upon widely available financial information services, such as Value Line. Investors also recognize that such analysts have additional insights into the various dynamics of the industries and individual companies they analyze, as well as a company's ability to adapt to ever-changing economic and market conditions.

Q24. PROVIDE A SUMMARY OF THE DCF MODEL RESULTS.
A24. As shown on Exhibit JD-3, the average result of the single-stage DCF model is $7.28 \%$.

## IX. CAPITAL ASSET PRICING MODELS (CAPM) AND (EXAPM)

Q25. EXPLAIN THE THEORETIC BASIS OF THE CAPM MODEL.
A25. CAPM theory defines risk as the co-variability of a security's returns with the market's returns measured by beta ( $\beta$ ). Stocks with a beta less than 1.0 indicates that it has a variability less than the market. Conversely, stocks with a beta greater than 1.0 have higher variability than the market. Large utility stocks are typically less variable than the overall market and therefore have an average beat of less than 1.0.

The CAPM assumes that all unsystematic risk can be eliminated through diversification. The risk that cannot be eliminated through diversification is referred to as systematic risk. Additionally, the CAPM postulates that investors require compensation for systematic risks resulting from of macroeconomic and other events that affect the returns on assets.

CAPM's starting point is the risk-free rate. To this is added a premium that investors demand to compensate them for the extra risk they are accepting. This equity market premium consists of the expected return from the return rate on the market less the riskfree rate. The equity risk premium is then multiplied by "beta." The CAPM model utilized is expressed as:
$\mathrm{Rs}=\mathrm{Rf}+\beta(\mathrm{Rm}-\mathrm{Rf})+\mathrm{FC}$
Where: Rs = Return rate on the common stock
$\mathrm{Rf}=$ Risk-free rate of return
$\mathrm{Rm}=$ Return rate on the market as a whole
$\beta=$ Adjusted beta (volatility of the security relative to the market as a whole)
FC $=$ Flotation Costs

Q26. DESCRIBE THE SELECTION OF THE BETA UTILIZED IN THE CAPM MODEL.

A26. I relied upon an average of the adjusted betas published by the Value Line. Value Line adjusts its calculated (or "raw") betas to reflect the tendency of the beta to regress to the market mean of 1.00 then calculates its beta over five years of data.

Q27. DESCRIBE THE SELECTION OF THE RISK-FREE RATE OF RETURN FOR YOUR CAPM ANALYSIS.

A27. The risk-free rate utilized for the CAPM is $3.40 \%$. The risk-free rate of $3.40 \%$ is based upon the average of the 30 -year Treasury Note consensus forecast for the six quarters ending with the 3rd quarter of 2023, from the June 1, 2022, Blue Chip Financial Forecast.

Q28. WHY IS THE YIELD ON THE LONG-TERM TREASURY BONDS APPROPRIATE FOR USE AS THE RISK-FREE RATE UTILIZED IN THE CAPM ANALYSIS?

A28. The risk-free rate reflects the level of return that can be achieved without accepting any risk. In actuality, there is no such thing as a purely riskless asset. In my CAPM analysis, the risk-free rate is recognized using the 30-year Treasury Note because the government can print money and raise taxes and is generally accepted as being considered risk-free. Additionally, the 30 -year Treasury Note is consistent with the long-term investment horizon and life of the rate base to which the allowed rate of return is applied.

Q29. EXPLAIN THE ESTIMATION OF THE RETURN RATE ON THE MARKET AS A WHOLE.

A29. The return rate on the market as a whole was calculated using a DCF model for a large number of dividend-paying S\&P 500 stocks. As of June 1, 2022, the result was $11.66 \%$.

Q30. HOW WAS A FLOTATION COSTS ADJUSTMENT UTILIZED IN THE APPLICATION OF THE CAPM MODEL?

A30. As stated previously, flotation cost is a generic term used to encompass various costs associated with the issuance of new common shares of stock. 20 basis points were added to the CAPM result to account for a flotation cost of four percent.

Q31. WHAT ARE THE RESULTS OF THE APPLICATION OF THE CAPM TO THE PROXY GROUP?

A31. As shown in Exhibit JD-4, the average CAPM equity cost rate is $10.56 \%$.

Q32. EXPLAIN THE THEORETICAL BASIS OF THE ECAPM.
A32. Numerous tests of the CAPM have measured the extent to which security returns and Beta coefficients are related, as predicted by the CAPM, confirming the CAPM's validity. The empirical CAPM ("ECAPM") reflects the reality that, while the results of these tests support the notion that the Beta coefficient is related to security returns, the empirical

Security Market Line ("SML") described by the CAPM formula is not as steeply sloped as the predicted SML.

Roger A. Morin stated in 2006:
"With few exceptions, the empirical studies agree that ... low-beta securities earn returns somewhat higher than the CAPM would predict, and high-beta securities earn less than predicted."

Therefore, the empirical evidence suggests that the expected return on a security is related to its risk by the following approximation: $K=R F+x \beta(R M-R F)+(1-x) \beta(R M-R F)$ where x is a fraction to be determined empirically. The value of x that best explains the observed relationship Return $=0.0829+0.0520 \beta$ is between 0.25 and 0.30 . If $x=0.25$, the equation becomes: $\mathrm{K}=\mathrm{RF}+0.25(\mathrm{RM}-\mathrm{RF})+0.75 \beta(\mathrm{RM}-\mathrm{RF})$

In view of theory and practical research, I have applied both the traditional CAPM and the ECAPM to the companies in the Utility Proxy Group and averaged the results.

Q33. WHAT ARE THE RESULTS OF THE APPLICATION OF THE ECAPM TO THE PROXY GROUP?

A33. As shown in Exhibit JD-4, the average ECAPM equity cost rate is $10.89 \%$.

Q34. WHAT ARE THE RESULTS OF APPLYING THE AVERAGE OF THE TRADITIONAL AND EMPIRICAL CAPM TO THE UTILITY PROXY GROUP?

A34. As shown in Exhibit JD-4, the average of the traditional CAPM and ECAPM equity cost rate is $10.72 \%$.

## X. COMPARABLE EARNINGS ANALYSIS

Q35. EXPLAIN THE COMPARATIVE EARNINGS APPROACH AND HOW IT WAS CALCULATED.

A35. The comparative earnings approach relies on the actual and projected realized returns of comparable risk companies as a proxy for the cost of equity of the utility of interest. The rationale behind the approach incorporates the efficient market hypothesis that a rational investor will include all available information in her investment decisions. In today's market, actual and projected returns to equity are readily available. Given this information, investors will demand an expected return consistent with the known realized and expected returns of companies with comparable risk. Regulation is intended to mimic the results of a competitive market, so the earnings of other firms facing similar risk, both regulated and unregulated, should be good proxies for the expected utility earnings. The proxy group for a comparable earnings analysis should comprise a reasonable number of firms with similar risk analyzed over a reasonable period. The proxy group should be large enough to mitigate the effect of outliers to ensure that the resulting average earnings are a strong estimator of the average of firms with similar risk. The time period requirement is necessary to wash out any short-term aberrations in the data. The most critical requirement is that the risk faced by the proxy group is representative of that faced by the utility of interest.

Theoretically, the proxy group in a comparable earnings analysis need not be in the same industry as the firm of interest. However, in the case of a utility, it is improbable that the risk faced by a non-regulated, non-utility, competitive firm could be considered comparable to that of a utility. However, Utilities are very different from companies that are not price regulated. Would it be reasonable to assume that a water utility has risks comparable to other firms such as Disney, Microsoft, Amazon, or Tesla? Therefore, I use the water proxy group in my comparative earnings analysis. Again, the purpose of regulation is to mimic the results of a competitive market. If we assume that the regulators are effective, then the rationale behind the analysis still holds. Publicly traded, analysis-
tracked, large water utilities are likely to be the most comparable in risk to another, albeit much smaller, water utility. Accepting that the regulators are doing an adequate job of mimicking competition, the realized and projected returns of regulated water utilities are the best proxy for the expected returns of the water operations of BWC.

Q36. EXPLAIN THE RESULTS OF THE COMPARATIVE EARNINGS ANALYSIS.
A36. The Comparative Earnings approach results are in Exhibit JD-5. Using data from the most recent Value Line Company Reports, the proxy group's average realized return to equity from 2022 to 2027 was $10.26 \%$. In 2022 the average projected return was reported as $9.84 \%$. For 2023 the projected return is $10.24 \%$. From 2025 to 2027, the return is expected to increase to $10.69 \%$. A clear trend emerges if you break the time period into five-year increments.

Rational investors incorporate all available information into their investment decisions. Given that water utility realized, and projected returns have been trending up and are expected to continue to increase, it is reasonable to anticipate that investors will demand similar expected returns of a comparable risk firm, i.e., another water utility. For that reason, I use the midpoint of the 2022-2027 average return and the 2022-2027 average return $(10.26 \%)$ as the comparable earnings approach cost of equity for the water operations of BWC.

## XI. MARKET / BOOK RATIO APPROACH

Q37. EXPLAIN THE MARKET/BOOK RATIO APPROACH USED TO ESTIMATE THE COST OF EQUITY FOR THE PROXY GROUP.

A37. The market/book approach attempts to reconcile differences between market value and the book value of equity. This approach is premised on the idea that if a utility's allowed return on equity is less than investors' expectations, the utility's stock price will fall, causing the
realized dollar return to move towards the investors' expected return evaluated at the market value of equity. For example, assume the market return for comparable risk companies is $10 \%$, and the book value of equity per share is $\$ 10$. If the allowed return is equal to the market return, the utility will earn $\$ 1.00$ per share, and the market value of equity should hold at $\$ 10$ per share. If, instead, the allowed return is set at $5 \%$, the utility will only earn $\$ 0.50$ per share, falling below the expected return. As a result, the market value of equity will fall to the point (\$5.00), where the $\$ 1$ realized return will yield a $10 \%$ market return. The M/B approach uses this concept to solve for the market return that would reconcile current market and book values of equity given realized returns, dividends, and earnings.

## Q38. EXPLAIN THE RESULTS OF THE M/B APPROACH.

A38. The M/B approach results are in Exhibit JD-6. The estimated costs of equity for the individual proxy companies range from $7.86 \%$ to $10.75 \%$, with an average of $8.91 \%$.

## XII. BUSINESS RISK ADJUSTMENTS

## Q39. DOES BWC ENCOUNTER UNIQUE BUSINESS RISK RELATIVE TO THE

 PROXY GROUP?A39. Yes, the proxy group consists of six large public-traded Utilities. In contrast, BWC is a much smaller private utility and therefore has several risks that the proxy group does not face. These risks include:

1) BWC is more capital-intensive than larger water utilities.
2) BWC experiences lower relative depreciation rates than natural gas utilities, providing less cash flow.
3) BWC is more likely to experience negative free cash flow, thereby increasing its financing requirements.
4) BWC credit metrics are inferior to those of larger water utilities.
5) BWC is substantially smaller than the other water utilities in the proxy group by every measure, including total revenues, total assets, and market capitalization.
6) BWC's earnings are much more volatile (uncertain) than larger water utilities' earnings.

Therefore, I am recommending three adjustments that compensate BWC for the abovelisted additional risks for which BWC must be compensated. These adjustments are a bond yield differential, a private placement premium, and a small utility risk premium.

Q40. THAT BEING SAID, DO RATING AGENCIES REFLECT COMPANY SIZE IN THEIR BOND RATING?

A40. No. Rating agencies do not have minimum company size requirements for any given rating level. This means a relative size analysis needs to be conducted for companies with similar bond ratings.

## XIII. BOND YIELD DIFFERENTIAL

Q41. EXPLAIN WHAT THE BOND YIELD DIFFERENTIAL IS AND HOW IT WAS CALCULATED.

A41. The bond yield differential is made to the results of the models to compensate for the fact that water utilities are smaller than the companies in the proxy group. The adjustment is based on the historical difference between the yields on bonds that could be issued by the companies in the proxy group, according to bond ratings, and the yield on BBB-rated bonds, the lowest investment grade. The assumption is that a small utility, given efficient management and a sound regulatory environment, should be considered at least in the
lowest investment grade category. However, an average water utility is too small to issue publicly traded bonds. (Lester 2001)

A bond yield differential was determined by calculating the average spread between ' A ' rated Utility $25 / 30$ Corporate Bonds and 'BBB' rated Utility $25 / 30$ Corporate Bonds as found in the Value Line Selection \& Opinion Reports for the past 120 months. This adjustment compensates for the difference between the credit quality of A-rated debt and the credit quality of the minimum investment grade rating. BWC is comparable to companies with the lowest investment grade bond rating, which is BBB. Therefore, a bond yield differential of 64 basis points was added to reflect the difference in yields between an A-rated bond, the median bond rating for the Proxy Group, and a BBB assumed bond rating for BWC. Further detail is in Exhibit JD-7.

## XIV. PRIVATE PLACEMENTS PREMIUM

Q42. EXPLAIN WHAT A PRIVATE PLACEMENT PREMIUM IS AND WHY IT SHOULD BE INCLUDED IN CALCULATING BWC'S FAIR RATE OF RETURN.

A42. A private placement is essentially the private sale of a firm's corporate debt or equity securities to a select number of investors. The buyers are typically institutional investors, such as insurance companies. Due to the scarcity of publicly disseminated information, private placement issuances are generally less liquid than exchange-traded securities. Thus, most private debt placements are held by the buyer until maturity.
Private placement investors require additional yield relative to comparable public bond issues, as lenders demand greater yield to compensate for increased liquidity risk and underwriting and monitoring costs. This premium is variable over time and is a function
of technical, supply and demand characteristics, credit fundamentals, and insurance liability requirements. ${ }^{3}$

Typical use of proceeds is similar to public bonds: refinancing debt, expansion, acquisitions, fundraising to take a company private, and stock buyback and recapitalization programs. Private placement transactions usually range from less than $\$ 100$ million to more than $\$ 1$ billion.

Typically, private placements provide $15-50$ basis points of additional spread relative to public bonds ${ }^{4}$, with the premium increasing to 100 basis points or more for more structured transactions. Supply and demand conditions may alter the premium ${ }^{5}$.

As recently as 2017 , approximately $28 \%$ of privately placed issuance was rated A- or higher in credit quality, had spreads that ranged from 80 to 155 basis points, and $71 \%$ of issuance was the equivalent of some form of BBB, had spreads ranging from 100 to 335 basis points ${ }^{6}$.

Based on the above, a private placement premium of 50 basis points was added to reflect the difference in yields on publicly traded debt and privately placed debt, which is illiquid. To adequality attract capital, an adjustment to reflect the fact that investors require a premium for the lack of liquidity of privately placed debt must be included.

## XV. SMALL UTILITY RISK PREMIUM

Q43. EXPLAIN WHAT A SMALL UTILITY RISK PREMIUM IS AND WHY IT SHOULD BE INCLUDED IN CALCULATING BWC'S FAIR RATE OF RETURN.

A43. Historically, small companies have shown greater risk and greater potential return than their larger capitalized counterparts. This is because investors tend to demand a higher

[^3]return to compensate for increased risk. If smaller companies did not provide a higher possible return, there would not be any demand to invest in them, and they would not have any ability to attract needed capital.

To capture the additional return exhibited by smaller companies, a size premium must be established and added to BWC's fair rate of return.

To determine an appropriate size premium, the most recent version of the Ibbotson Associates' Size Premia for the Decile Portfolios of the NYSE/AMEX/NASDAQ (ISP) was utilized. The ISP groups companies into ten deciles based on a range of total capitalization. The Proxy Group's average capitalization is approximately 6.191 billion, which places it in decile 4 of the ISP. Decile five has a premium of 0.54 percent above the results of the common equity cost rate models.

To determine what decile BWC falls into, a conservative approach of using BWC's parent company (CORIX US Regulated Utilities or CORIX) was utilized. CORIX's market capitalization is approximately 718 million, which places it in decile 8 , which has a premium of 1.21 percent. Given that CORIX is not in the same decile as the proxy group, the difference in the size premiums of deciles 8 and 4 should be used as a BWC's small utility risk premium. Therefore, a small utility risk premium of 0.67 percent ( 1.21 percent -0.54 percent) is recommended. Further detail is in Exhibit JD-8.

## XVI. CONCLUSION

## Q44. WHAT IS THE RECOMMENDED COST OF COMMON EQUITY FOR BWC?

A44. After applying the business risk adjustments to the average of the common equity cost rate models, an adjusted cost of common equity of 10.95 percent results as summarized in the table below:

| Single-Stage DCF Model | $7.28 \%$ |
| :--- | ---: |
| CAPM | $10.72 \%$ |
| Comparable Earnings | $10.26 \%$ |
| Market to Book Capitalization Ratio | $8.91 \%$ |
| AVERAGE | $\mathbf{9 . 2 9 \%}$ |
|  | $0.49 \%$ |
| Plus Bond Yield Differenital | $0.50 \%$ |
| Plus Private Placement Premium | $\mathbf{0 . 6 7 \%}$ |
| Plus Small-Utility Risk Premium |  |
|  | $\mathbf{1 0 . 9 5 \%}$ |

Based on the preceding, I conclude that a reasonable cost of common equity for the Company is $10.95 \%$. In my opinion, a common equity cost rate of $10.95 \%$ is fair, just, reasonable, and conservative given current capital market conditions, providing BWC with sufficient earnings to enable it to attract necessary new capital.

Q45. DOES THAT CONCLUDE YOUR DIRECT TESTIMONY?
A45. Yes.

## SUMMARY OF RESULTS

| Single-Stage DCF Model | $7.28 \%$ |
| :--- | ---: |

VI. RESULTS OF THE LEAD-LAG STUDY ..... 8
VII. CONCLUSION ..... 13

## I. INTRODUCTION AND OUALIFICATIONS.

Q. STATE YOUR NAME AND ADDRESS.
A. My name is Harold Walker, III. My business address is 1010 Adams Avenue, Audubon, Pennsylvania, 19403.
Q. WHAT IS YOUR PROFESSION AND BACKGROUND?
A. I am employed by Gannett Fleming Valuation and Rate Consultants, LLC as Manager, Financial Studies.
Q. BRIEFLY SUMMARIZE YOUR PRIOR WORK AND REGULATORY EXPERIENCE.
A. My educational background, business experience and qualifications are attached hereto as Appendix A.

## II. SCOPE OF TESTIMONY

Q. WHAT IS THE PURPOSE OF YOUR DIRECT TESTIMONY?
A. The purpose of my testimony is to recommend an appropriate cash working capital allowance for inclusion in Bermuda Water Company, Inc. ("BWC" or "Company") rate base in this proceeding before the Arizona Corporation Commission ("Commission"). My recommendation is based upon the results of a lead-lag study that was performed under my direct supervision.
Q. HAVE YOU PREPARED AN EXHIBIT PRESENTING THE RESULTS OF YOUR STUDY?
A. Yes. I have prepared Exhibit HW-1 which contains the 31 supporting schedules, identified as Schedule HW-1 through Schedule HW-31, summarizing the Company's cash working capital requirement in this proceeding.
Q. WOULD YOU PLEASE EXPLAIN THE RATEMAKING PRINCIPLES CONCERNING THE INCLUSION OF WORKING CAPITAL AS AN ELEMENT

## OF RATE BASE?

A. Yes. The working capital allowance is a component of rate base. A utility's need for working capital was first recognized in the noted United States Supreme Court case, Smyth v. Ames. ${ }^{1}$ Among the many benchmarks established in the case was the "property devoted to public use" doctrine as a basis for fixing rates. The case recognized that among the matters to be considered in determining the value of property used was "the sum required to meet operating expenses." ${ }^{2}$ Since that time, working capital has generally been recognized as a proper item to be included in the rate base on which a utility is entitled to earn a return.
Q. WHAT IS CASH WORKING CAPITAL?
A. Cash working capital is a component of working capital, representing the amount of funds necessary to finance the day-to-day operations of the Company. For ratemaking purposes, cash working capital is included as a component of a utility's rate base.
Q. WHY IS CASH WORKING CAPITAL INCLUDED AS AN ELEMENT OF RATE BASE?
A. Working capital is included in rate base to compensate investors for the use of their funds over and above their investment in plant, and to provide investors with a return on the funds

[^4]required by the Company for daily operations. Cash working capital bridges the gap between the time when funds are provided to the Company by investors to allow the Company to provide service to customers, and the time revenues are received from customers as reimbursement for these services.

## IV. OVERVIEW OF A LEAD-LAG STUDY

## Q. HOW WAS THE CASH WORKING CAPITAL REQUIREMENT DETERMINED?

A. I conducted a lead-lag study to determine BWC's cash working capital requirement. The lead-lag study in this case measured the level of funding required to operate on a day-today basis in a sufficient amount to cover the cost of service. This was measured by calculating the net lag between: (1) the amount of time elapsed between the provision of the cost of service and the receipt of the revenue requirement from the Company's customers (known as the revenue lag); and (2) the amount of time elapsed between when the Company receives goods and services used by the Company to provide service and the payment by the Company for those cost of service items (known as the expense lead). The difference between these two elapsed periods of time is known as the "net lag." The net lag was multiplied by the average daily cost of service (or revenue requirement) to determine the Company's cash working capital requirement.
Q. WAS BWC REQUIRED TO CONDUCT A LEAD-LAG ANALYSIS IN SUPPORT OF ITS CASH WORKING CAPITAL REQUIREMENT?
A. Yes. In Decision 77976 (April 29, 2021) in the last BWC rate case (Docket W- 01812A-20-0109) the Commissioner ordered that the Company "shall perform a lead-lag study to support any request for a working capital allowance in the Company's next rate case."3

[^5]
## Q. PLEASE DESCRIBE THE COMPONENTS OF A CASH WORKING CAPITAL ANALYSIS.

A. As I've touched on above, the two primary components of a cash working capital analysis are revenue lags and expense leads. The revenue lag is the elapsed time between when the delivery of a company's product, or provision of service, to its customers occurs and when a company receives payment for the delivery of the product. Investor-provided funds are required to keep a company running during the revenue lag time period, when the revenue stream is temporarily insufficient to finance daily operational needs.

As mentioned above, the expense lead is the elapsed time between when a good or service is provided to a company and when a company pays its supplier, or vendor, for the good or service. During the expense lead time period, cash received from customers may temporarily exceed a company's payments to its suppliers for goods or services, and the excess may be used to repay investor-provided funds.

The net difference between the revenue lag and expense lead determines a company's cash working capital requirement. Additional details of the revenue lag and the expense lead calculations are provided below.
Q. GENERALLY SPEAKING, HOW DID YOU CALCULATE THE REVENUE LAG?
A. The revenue lag is the sum of three distinct components: the service period lag, the billing lag, and the collection lag.

## Q. WHAT IS THE SERVICE PERIOD LAG?

A. The service period lag is the average time between meter readings. The average, or midpoint service period lag, is produced by dividing the service period of roughly 30 days by two. The average, or mid-point, between meter readings, based on monthly meter readings, which were annualized by determining the 25 -day average balance and multiplying by 365 days.
the payment date for the service or good. If payment for the service or good was provided on the 30th day and the midpoint of the service period was the 10th day, the payment lead is 20 days ( 30 days -10 days).

## Q. WHY ARE MIDPOINTS USED IN THE CASH WORKING CAPITAL ANALYSIS?

A. Midpoints are used to determine the weighted average period during which a service or good is rendered or provided during the service period, or between meter reads. The midpoint assumes that, on average, service is provided evenly over the service period. For example, if a service is provided over a 30 -day period, then on average, 30 days of service was provided evenly for 15 days $(30 \div 2)$ of the service period. Mathematically, the midpoint is the weighted average number of days that the full service period number of days (e.g., 30 days) was provided.

## V. BWC'S LEAD-LAG STUDY

## Q. DID YOU CONSIDER BWC'S OVERALL COST OF SERVICE IN YOUR LEAD-

## LAG STUDY?

A. No. I considered only a portion of BWC's cost of service items in my lead-lag studies to be consistent with the "Partial Revenues" lag used in Arizona. In Arizona, "Partial Revenues" do not include non-cash expense items.

A lead-lag study based on "Partial Revenues" likely understates the full cash working capital requirement and affords the minimum cash working capital requirement. A lead-lag study based on the entire revenue requirement and cost of service provides a more accurate measure of the cash working capital requirement.

## Q. WHAT DATA SET DID YOU UTILIZE IN YOUR LEAD-LAG STUDY?

A. The data sets were selected after developing an understanding of the Company's collections, payment policies, and procedures. To inform my understanding of these items,

I requested representative data sets from the Company. Once the requested raw data had been provided, data validation was performed by comparing an actual invoice or a bill with data from the Company's systems to ensure accuracy.

The revenue lag data set for the Company was based on an accounts receivable analysis of the beginning balance, the daily charges to this balance as bills were processed and mailed, and the daily receipts for all the days of the year during the 12 months ended June 30, 2022. The revenue lag data set for the Company also included an analysis of the cycle billing, or the beginning and ending service dates (meter read dates), and the date bills were mailed (or posted).

The expense lead data set was based on information generated from the Company's central accounts payable system. The expense lead data sets for the 12 months ended June 30, 2022 were analyzed to develop the service beginning and ending dates, the amount purchased, and the date of payment. For some of the larger expense and tax accounts (line items), we randomly sampled the invoices to gather the required information. In instances where there were large differences in the dollar amount of the invoices in a single expense category, sampling was focused on the largest invoices within the expense category. For example, the larger "utility-electric power O\&M expenses" accounts were sampled instead of the smaller accounts. In total, the samples analyzed averaged $93 \%$ of the Company's total expense and tax dollars. ${ }^{5}$

## Q. WHAT TIME PERIOD DOES YOUR LEAD-LAG STUDY ENCOMPASS?

A. The lead-lag study in this case analyzed the net revenues and the associated net cost of

[^6]service during the 12 months ended June 30,2022 , to derive the lag (lead) days for the revenue requirement and the related cost of service line items.

## Q. HOW WERE THE REVENUE LAG DAYS AND EXPENSE LEAD DAYS USED TO CALCULATE BWC'S CASH WORKING CAPITAL REQUIREMENT?

A. For each cost of service line item, the lead days (expense) were subtracted from the lag days (revenue) to determine the net lag days for that cost of service line item. Next, the net lag days for that cost of service line item was divided by 365 days to determine the "Lead/Lag Factor," or daily net lag. This "Lead/Lag Factor" was then multiplied by the cost of service line item to produce the cash working capital required for each cost of service line item. This process was followed for each cost of service line item. Finally, the cash working capital requirement of each cost of service line item was totaled (summed) to calculate BWC's total cash working capital requirement.

## VI. RESULTS OF THE LEAD-LAG STUDY

## Q. WHAT ARE THE RESULTS OF THE LEAD-LAG STUDY?

A. The lead-lag schedules are set forth in Schedule HW-1 through Schedule HW-31 provided in my Exhibit HW-1. Schedule HW-1 summarizes BWC's cash working capital requirements. The cash working capital requirement for BWC is $\$ 242,000$.

## Q. PLEASE DESCRIBE SCHEDULE HW-1.

A. As shown on Schedule HW-1, the cash working capital requirement is based on the net lag days required to finance each cost of service line item. The net lag day calculations are a result of subtracting their respective expense lead days from the revenue lag days to determine the appropriate net lag days, which was then divided by 365 days (net lag days $\div 365$ days) line item and then multiplied by the expense line item. The lag days for the receipt of the revenue requirement is developed on Schedule HW-2. The lead days for the
cost of service line items are developed on Schedules HW-4 through HW-31, and the schedule references for the lead days for the cost of service line items is shown on page 1 of Schedule HW-3.
Q. PLEASE EXPLAIN THE PROCEDURES USED TO DETERMINE BWC's CASH WORKING CAPITAL REQUIREMENT SHOWN ON SCHEDULE HW-1.
A. The process used to determine BWC's cash working capital requirement, shown on Schedule HW-1, is generally the same for each line item shown. Because the process is generally the same, I will discuss the utility-electric power expense line item (line no. 6) as a means of explaining the methodology used for each line item. ${ }^{6}$

The utility-electric power expense line item (line no. 6) amount of \$271,799 was multiplied by the "Lead/Lag Factor" of 0.0290 to determine the cash working capital required amount, $\$ 7,882(\$ 271,799 \times 0.0290=\$ 7,882)$. The "Lead/Lag Factor" of 0.0290 was determined by dividing the 10.6 net lag days by 365 days ( 10.6 net lag days $\div 365$ days $=0.0290$ ). The 10.6 -day net lag for utility-electric power expense was determined by subtracting the utility-electric power expense 35.7 -day expense lead from the 46.3 -day revenue lag ( 46.3 lag days -35.7 lead days $=10.6$ net lag days).

A similar process was followed for each cost of service line item. The cash working capital requirement of all line items were totaled (summed) to calculate BWC's $\$ 242,000$ total cash working capital requirement.
Q. PLEASE EXPLAIN THE PROCEDURES USED TO DETERMINE THE REVENUE LAG.
A. Schedule HW-2 shows the development of the 46.3-day lag for the Company's revenue 6 All cost of service expense line items were handled in an identical manner.
requirement. The Company's 46.3 -day revenue lag is developed on page 1 of Schedule HW-2. The revenue requirement lag reflects the Company's service, billings, and collections frequencies.

## Q. PLEASE EXPLAIN THE PROCEDURES USED TO DETERMINE THE SERVICE PERIOD AND THE BILLING LAG DAYS FOR CUSTOMER REVENUES.

A. The lag days for the service period and the billing lag are developed on page 2 of Schedule HW-2. As mentioned previously, the service period lag was measured from the midpoint of the service period to the meter reading date, and the billing lag was measured from the meter reading date to the billing date.

The service period of 30.0 days is divided by two to produce the average service period lag of 15.0 days, as shown on page 2 of Schedule HW-2. BWC's bills are prepared, mailed, and recorded to accounts receivable 9.9 days after meters are read. Adding the average service period lag to the billing lag produces a combined 24.9 -day service period and billing lag ( 15.0 days +9.9 days $=24.9$ days) as shown on page 2 of Schedule HW-2.
Q. PLEASE DESCRIBE THE PROCEDURE USED TO CALCULATE THE COLLECTION LAG.
A. As mentioned previously, the collection lag is the average number of days from the date the bills were mailed to the date payments are received and was determined by summing the daily accounts receivable balance during the test year and dividing by the sum of the daily test year receipts. This results in an average collection lag of 21.4 days as shown on page 3 of Schedule HW-2.

## Q. PLEASE SUMMARIZE THE TOTAL REVENUE LAG.

A. The total revenue lag of 46.3 lag days is the result of adding the 24.9 -day service period and billing lag and an average collection lag of 21.4 days as shown on page 1 of Schedule

HW-2.

## Q. PLEASE EXPLAIN THE CALCULATION OF LEAD DAYS FOR THE COST OF SERVICE EXPENSES SHOWN ON SCHEDULE HW-1.

A. For each cost of service expense item that is shown, the lead days were calculated for each invoice or account based on the midpoints of the service periods to the dates the Company paid the invoices or accounts. Schedule HW-3 shows the schedule references for the cost of service lead days for the Company.

## Q. HOW WERE THE LEAD DAYS DETERMINED FOR THE O\&M EXPENSES

 SUB-ACCOUNT LINE ITEMS SHOWN ON SCHEDULE HW-1?A. For the O\&M expense sub-accounts line items shown, the lead days were determined for each invoice or account sampled based on the midpoints of the service periods to the dates the Company paid the invoices or accounts. As explained previously, sampling was randomly done for the invoices within the larger expense and tax categories.

For example, the weighted average lead days for plant and system maintenance expense is 97.7 -days (see Schedule HW-4). The lead days for plant and system maintenance expense were calculated for each invoice examined based on the midpoints of the service periods to the dates the Company paid the invoices. In total, $37 \%$ of the plant and system maintenance expense were sampled. Similar analyses were conducted for materials and supplies (see Schedule HW-5), chemicals (see Schedule HW-6), testing (see Schedule HW-7), utility-electric power (see Schedule HW-8), salaries \& wages (see Schedule HW-9), employee benefits - retirement (see Schedule HW-10), employee benefits - other employee benefits (see Schedule HW-11), consulting/outside services (see Schedule HW-12), information technology (IT) (see Schedule HW-13), insurance (see Schedule HW-14), office (see Schedule HW-15), travel (see Schedule HW-16),
fleet/vehicles (see Schedule HW-17), license and franchise fees (see Schedule HW-18), education and training (see Schedule HW-19), billing and customer service (see Schedule HW-20), and other miscellaneous expense (see Schedule HW-21).
Q. HOW WERE THE LEAD DAYS DETERMINED FOR THE CORPORATE allocation Or "CAM" EXPENSE SUB-ACCOUNT LINE ITEMS SHOWN ON SCHEDULE HW-1?
A. For the Corporate Allocation (CAM) expense line item, the lead days were calculated based on the midpoint of the quarterly service period to the payment date. The determination of the Corporate Allocation (CAM) expense sub-account lead days is shown on Schedule HW-22.
Q. HOW WERE THE LEAD DAYS DETERMINED FOR THE TAXES OTHER THAN INCOME TAXES SUB-ACCOUNT LINE ITEMS SHOWN ON SCHEDULE HW-1?
A. For the taxes other than the income taxes sub-account line item, the lead days were calculated based on the midpoint of the tax service period to the payment date, weighted by the actual amount paid. The taxes other than income taxes sub-account payroll taxes is shown on Schedule HW-23, unemployment taxes is shown on Schedule HW-24, and other taxes is summarized shown on Schedule HW-25 based the lead days calculated on Schedule HW-26 through Schedule HW-29.
Q. HOW WERE THE LEAD DAYS DETERMINED FOR THE INCOME TAXES SUB-ACCOUNT LINE ITEMS SHOWN ON SCHEDULE HW-1?
A. For the federal taxes (current) and state taxes (current) sub-account line items shown, the lead days were calculated based on the midpoint of the tax period to the payment date, weighted by the percent of the payment required. The derivation of the federal taxes
(current) 28.8 lead days is shown on Schedule HW-30, and the derivation of the state taxes (current) 28.8 lead days is shown on Schedule HW-31.

## VII. CONCLUSION

## Q. WHAT ARE THE RESULTS OF THE LEAD-LAG STUDY?

A. The results of the lead-lag study are shown on Schedule HW-1. The results of the lead-lag study shown on Schedule HW-1 show that the Company requires $\$ 242,000$ of cash working capital to bridge the gap between the time when funds are provided to the Company by investors to allow the Company to provide service to customers, and the time revenues are received from customers as reimbursement for these services.

## Q. DOES THIS CONCLUDE YOUR DIRECT TESTIMONY?

A. Yes, it does.

Professional Qualifications<br>of<br>Harold Walker, III<br>Manager, Financial Studies<br>Gannett Fleming Valuation and Rate Consultants, LLC.

## EDUCATION

Mr. Walker graduated from Pennsylvania State University in 1984 with a Bachelor of Science Degree in Finance. His studies concentrated on securities analysis and portfolio management with an emphasis on economics and quantitative business analysis. He has also completed the regulation and the rate-making process courses presented by the College of Business Administration and Economics Center for Public Utilities at New Mexico State University. Additionally, he has attended programs presented by The Institute of Chartered Financial Analysts (CFA).

Mr. Walker was awarded the professional designation "Certified Rate of Return Analyst" (CRRA) by the Society of Utility and Regulatory Financial Analysts. This designation is based upon education, experience, and the successful completion of a comprehensive examination. He is also a member of the Society of Utility and Regulatory Financial Analysts (SURFA) and has attended numerous financial forums sponsored by the Society. The SURFA forums are recognized by the Association for Investment Management and Research (AIMR) and the National Association of State Boards of Accountancy for continuing education credits.

Mr. Walker is also a licensed Municipal Advisor Representative (Series 50) by Municipal Securities Rulemaking Board (MSRB) and Financial Industry Regulatory Authority (FINRA).

## BUSINESS EXPERIENCE

Prior to joining Gannett Fleming Valuation and Rate Consultants, LLC., Mr. Walker was employed by AUS Consultants - Utility Services. He held various positions during his eleven years with AUS, concluding his employment there as a Vice President. His duties included providing and supervising financial and economic studies on behalf of investor owned and municipally owned water, wastewater, electric, natural gas distribution and transmission, oil pipeline and telephone utilities as well as resource recovery companies.

In 1996, Mr. Walker joined Gannett Fleming Valuation and Rate Consultants, LLC. In his capacity as Manager, Financial Studies and for the past twenty-five years, he has continuously studied rates of return requirements for regulated firms. In this regard, he supervised the preparation of rate of return studies in connection with his testimony and in the past, for other individuals. He also assisted and/or developed dividend policy studies, nuclear prudence studies, calculated fixed charge rates for avoided costs involving cogeneration projects,
financial decision studies for capital budgeting purposes and developed financial models for determining future capital requirements and the effect of those requirements on investors and ratepayers, valued utility property for acquisition and divestiture, and assisted in the private placement of fixed capital securities for public utilities.

Head, Gannett Fleming GASB 34 Task Force responsible for developing Governmental Accounting Standards Board (GASB) 34 services and educating Gannett Fleming personnel and Gannett Fleming clients on GASB 34 and how it may affect them. The GASB 34 related services include inventory of assets, valuation of assets, salvage estimation, annual depreciation rate determination, estimation of depreciation reserve, asset service life determination, asset condition assessment, condition assessment documentation, maintenance estimate for asset preservation, establishment of condition level index, geographic information system (GIS) and data management services, management discussion and analysis (MD\&A) reporting, required supplemental information (RSI) reporting, auditor interface, and GASB 34 compliance review.

In 2004, Mr. Walker was elected to serve on the Board of Directors of SURFA. Previously, he served as an ex officio director as an advisor to SURFA's existing President. In 2000, Mr. Walker was elected President of SURFA for the 2001-2002 term. Prior to that, he was elected to serve on the Board of Directors of SURFA during the period 1997-1998 and 1999-2000. Currently, he also serves on the Pennsylvania Municipal Authorities Association, Electric Deregulation Committee.

## EXPERT TESTIMONY

Mr. Walker has submitted testimony or been deposed on several topics before regulatory commissions and courts in 26 states including: Arizona, California, Colorado, Connecticut, Delaware, Hawaii, Idaho, Illinois, Indiana, Kentucky, Maryland, Massachusetts, Michigan, Missouri, New Hampshire, Nevada, New Jersey, New York, North Carolina, Oklahoma, Pennsylvania, Rhode Island, South Carolina, Vermont, Virginia, and West Virginia. His testimonies covered various subjects including lead-lag studies, fair rate of return, fair market value, the taking of natural resources, benchmarking, appropriate capital structure and fixed capital cost rates, depreciation, purchased water adjustments, synchronization of interest charges for income tax purposes, valuation, cash working capital, financial analyses of investment alternatives, and fair value. The following tabulation provides a listing of the electric power, natural gas distribution, telephone, wastewater, and water service utility cases in which he has been involved as a witness.

| Lag Days | <br>

$(2)$ \& Amount <br>

$(3)$ \& | Weighted |
| :---: |
| Amount | <br>

$(4)$
\end{tabular}

Hourly employees are paid 6 days after the end of each two week pay period. Salary employees are paid on the 15 th and last day of the month, or earlier if the 15th or last day of the month falls on a weekend.

Payments are handled by an outside vendor, which is ADP. Uploads are made to ADP 3 days prior to pay day with money leaving the bank account one day prior to pay day.

| Salaries and Wages |  |  |  |

| Facts | $(1)$ | (Lead)/ <br> Lag Days |
| :--- | :--- | :--- |
| $(2)$ | Amount | Weighted <br> Amount |
| $(3)$ |  |  |

Hourly employees are paid 6 days after the end of each two week pay period. Salary employees are paid on the 15 th and last day of the month, or earlier if the 15th or last day of the month falls on a weekend.

Payments are handled by an outside vendor, which is ADP. Uploads are made to ADP 3 days prior to pay day with money leaving the bank account one day prior to pay day.

[^5]:    ${ }^{3}$ Decision 77976 (Docket W-01812A-20-0109) at 12, lines 2-3.

[^6]:    s As shown on page 2 of Schedule HW-3, the sampling for the total expense and tax dollars paid totaled $93 \%$ and reflected a range of sampling from $37 \%$ to over $100 \%$ of the total line-item dollars (or expenses). Sampling of total line-item dollars greater than $100 \%$ of the expense occurred for those line items which included the capital portion, employee contributions, deferred amounts and/or cash payment verses accrual expense amounts.

[^7]:    * Lead days for expenses are calculated from the mid-point of the service period to the payment date. (See Schedules 4-31.)
    ** Lead days are based on Salaries \& Wages lead days.
    *** Lead days are assumed to be 0 .
